**Kyiv, 23 May 2017 – The consumer confidence of Ukrainians did not experience significant changes in April 2017: The Consumer Confidence Index (CCI) equals 54.9, which is 0.6 points lower than the indicator in March. Index of Propensity to Consume and Index of Economic Expectations have changed most of all. It is proved by the data of The consumer confidence of Ukrainians survey conducted monthly by GfK Ukraine.**

In April 2017, *the Consumer Confidence Index (CCI)* equals 54.9 that is 0.6 points lower than the indicator in March 2017.

*Index of the Current Situation (ICS)* decreased by 3.1 points to the level of 50.2. The components of this index have changed as follows:

- *Index of Current Personal Financial Standing (x1)* equaled 43, which is 1 point higher than in March 2017;
- *Index of Propensity to Consume (x5)* decreased by 7.1 points and reached the indicator of 57.4.

*Index of Economic Expectations (IEE)* increased by 1 point and reached 57.9 in April. The components of this index have changed as follows:

- *Index of Expected Changes in Personal Financial Standing (x2)* increased by 2 points comparing to March's indicator and reached the level of 57;
- *Index of Expectations of the Country's Economic Development Over the Next Year (x3)* decreased by 2.8 points and equals 45.2;
- *Index of Expectations of the Country's Economic Development in the Country Over the Next 5 Years (x4)* increased by 7.9 points and reached the level of 71.6.

In April, the expectations of Ukrainians regarding the possibility of unemployment has not changed: *Index of Expectations of Changes in Unemployment* reached the level of 142.4, which is 0.2 points lower than the respective indicator in March. Meanwhile, *Index of Inflationary Expectations* reached 183.9, which is 1.6 points higher than in March. The expectations of Ukrainians regarding the hryvna's exchange rate in the coming three months improved: *Index of Devaluation Expectations* decreased by 3.5 points and reached the level of 140.1.

*«Overall Consumer Confidence Index has not changed. On the one hand, the expectations of the country's economic development in the country over*

the next 5 years improved. On the other hand, Index of Propensity to Consume decreased. We consider, that improvements in the expectations of the country's economic development are the result of the adoption of visa-free regime between Ukraine and the EU (Adopted by the European Parliament on April 6). It is necessary to mention that the decrease in the Index of Propensity to Consume happened in the group of low income consumers», – GfK Ukraine analysts comment.

Consumer Confidence Index in Ukraine (16+ target group)

### Dynamics of the Consumer Confidence Index in Ukraine (16+ target group)

Month, year	Consumer Confidence Index (CCI)	Index of the Current Situation (ICS)	Index of Economic Expectations (IEE)	Index of Expectations of Changes in Unemployment (IECU)	Index of Inflationary Expectations (IIE)	Index of Devaluation Expectations (IDE)
04'17	54.9	50.2	57.9	142.4	183.9	140.1
03'17	55.5	53.3	56.9	142.6	182.3	143.6
04'16	49.1	43.5	52.7	147.5	185.5	144.6

### How the indices are calculated

The consumer confidence survey is conducted in Ukraine since June 2000. From January 2009 consumer confidence survey is conducted on a monthly basis.

In Ukraine, the Consumer Confidence Index is determined through a random survey of domestic households. The poll involves 1,000 individuals aged 16+. (Up to April 2014 the poll involved 1,000

respondents aged 15-59). A representative sample is selected by gender and age, also by type and size of settlement. In April 2014 Autonomous Republic of Crimea was excluded from the sample of consumer confidence research in Ukraine. The margin of error is 3.2%. The survey is carried out on 1-15<sup>th</sup> every month.

To define the CCI, respondents are asked these questions:

1. How has the financial standing of your family changed over the last six months?
2. How do you think your family's financial standing will change in the next six months?
3. Looking at economic conditions in the country as a whole, do you think the next 12 months will be good or bad?
4. Looking at the next five years, will they be good ones or bad ones for the country's economy?
5. In terms of large purchases for your home, do you think now is generally a good time or a bad time to make such purchases?

Each of these questions is related to a corresponding index:

- Index of Current Personal Financial Standing (x1);
- Index of Expected Changes in Personal Financial Standing (x2);
- Index of Expected Economic Conditions in the Country Over the Next Year (x3);
- Index of Expected Economic Conditions in the Country Over the Next 5 Years (x4);
- Index of Propensity to Consume (x5).

Indices are constructed thus: the share of negative answers is deducted from the share of positive answers, and 100 is added to this difference in order to eliminate negative values. On the basis of these five indices, three aggregate indices are calculated:

- Consumer Confidence Index (CCI) as the arithmetic average of indices x1–x5;
- Index of the Current Situation (ICS) as the arithmetic average of indices x1 and x5;
- Index of Economic Expectations (IEE) as the arithmetic average of indices x2, x3, and x4.

Index values range from 0 to 200. The index equals 200 when all respondents positively assess the economic situation. It totals 100 when the shares of positive and negative assessments are equal. Indices of less than 100 indicate the prevalence of negative assessments.

To determine the Index of Expected Changes in Unemployment (IECU), the Index of Inflationary Expectations (IIE) and the Index of Devaluation Expectations (IDE), the respondents are asked these three questions:

1. Do you think that within next 12 months the number of unemployed (people who do not have job and are looking for work) will increase, will remain roughly the same, or will decrease?
2. How do you think that prices for major consumer goods and services will change in the next 1–2 months?
3. How do you think the USD value will change towards the UAH value during the next 3 months?

The IECU, the IIE and the IDE are calculated thus: the share of answers that indicate a decrease of unemployment/inflation/devaluation is subtracted from the share of answers that indicate the growth of unemployment/inflation/devaluation, and 100 is added to the difference to eliminate negative values. The values of indices can vary from 0 to 200. The index totals 200 when all residents expect an increase in unemployment/inflation/devaluation.

## About GfK

GfK is the trusted source of relevant market and consumer information that enables its clients to make smarter decisions. More than 13,000 market research experts combine their passion with GfK's long-standing data science experience. This allows GfK to deliver vital global insights matched with local

market intelligence from more than 100 countries. By using innovative technologies and data sciences, GfK turns big data into smart data, enabling its clients to improve their competitive edge and enrich consumers' experiences and choices.
