

Is Prevail effective against COVID-19?

Yes, when using Prevail Disinfectants we do expect efficacy against coronavirus disease.

The coronavirus (COVID-19) is an enveloped virus, meaning that it is relatively easy to kill. Prevail Ready-to-Use Liquid and Wipes should be used with a 3-minute contact time. Prevail Concentrate should be used with a 5-minute contact time and a 1:40 dilution.

With regards to emerging viral pathogens such as COVID-19, Health Canada has the broad-spectrum virucide rule stating that broad-spectrum virucidal disinfectants (including Prevail) can expect efficacy against the emerging viral pathogen when used in accordance with Poliovirus Type 1 on hard non-porous surfaces.
