Keeping your Credit Union modern & mobile

Digital is fast becoming the channel of choice for consumers and introducing smart, mobile services is key to improving the experiences of your existing customers, as well as attracting new ones to support your growth strategy.

81% of banks offer mobile apps

61% expect that two thirds of their members will be mobile by 2020

Allowing your members to login with Touch ID means they can access their Credit Union account with just their fingerprint, so they don't need passwords or pins.

Modern member experience

Allowing members to interact with your Credit Union from a distance means you can re-engage with members who have moved away, or are too busy to come into a branch

The flexible nature of Touch ID appeals to the millennial market, allowing you to attract younger members

Compliance

Touch ID was designed with PSD2 in mind, using two step authentication that provides simple, secure access that's compliant with current regulation

Efficient Operations

Gives members the freedom to check balances, pay bills, and transfer funds from anywhere.

24/7 account access means shorter queues, speeding up your day-to-day member services

Touch ID doesn't rely on easily forgotten pins, saving you money on repeated pin requests

A competitive edge

Providing better member services allows you to compete with high street banks and fintechs

With Touch ID, you can modernise and grow without losing focus on the core nature of your business - giving your members easy access to their savings & loans

"We're demonstrating our commitment to our members by offering the most innovative and secure online and mobile user experience."

Sean Hosford
CEO, HSSCU
