Scion 2.0 Release

Improve your Credit Union
for staff, management,
& members

Wellington IT's new 2.0 Release is now available, with 100's of changes designed to make our system easier and more straightforward to use.

There are four main areas of improvement offering Credit Unions opportunities to change the way you work on a day to day basis, helping you to grow, manage, and protect your Credit Union more effectively

Reducing the burden of compliance

The new and improved 2.0 release gives you better visibility of a member's pledged shares, which means it's easier for you to ensure members don't over-commit to loans they won't be able to pay back.

Management has more controls over lodgements with new automated controls designed to help with CP88.

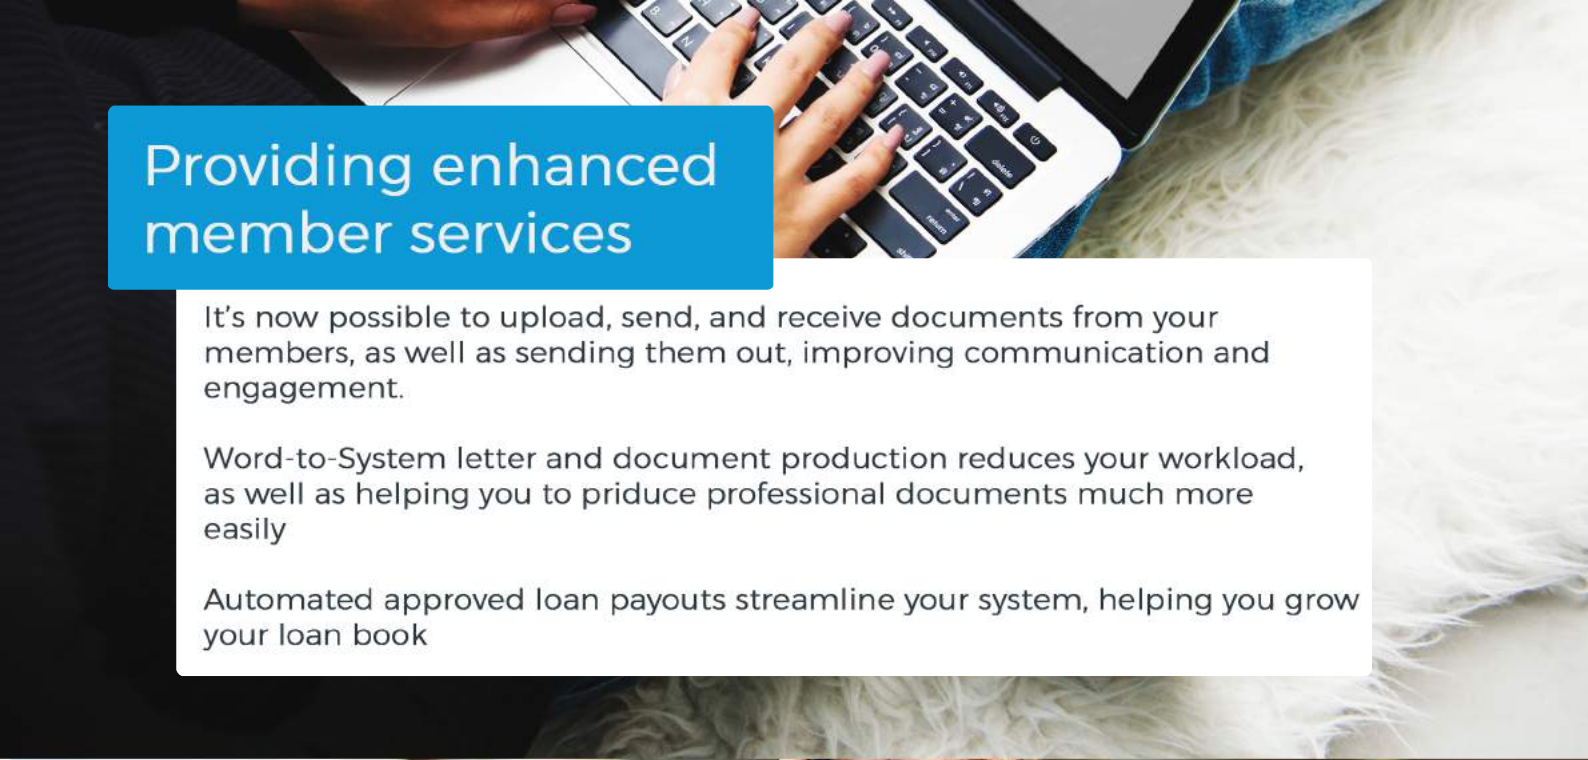

You can better protect your Credit Union with our automated AML checks, reducing the time your staff have to spend checking manually, and keeping your Credit Union compliant.

Saving time with better reporting

Reports within the new 2.0 release are easier to filter, manipulate, and analyse, saving you time and reducing staff workloads.

A number of reports are now available to be viewed in excel, PDF, and HTML formats, making it easier than ever to access your data.

With the improvements to the automation, reporting, and back end of your system, your staff can spend time focusing on developing and improving member services.

Providing enhanced member services

It's now possible to upload, send, and receive documents from your members, as well as sending them out, improving communication and engagement.

Word-to-System letter and document production reduces your workload, as well as helping you to produce professional documents much more easily

Automated approved loan payouts streamline your system, helping you grow your loan book

Improving operational efficiency

The new Creditor's Ledger with linked invoices means you can automatically keep track of credit and debit transactions, saving you and your staff time

New controls for Member Verification options saves your staff time and effort by eliminating manual checks.

Workflow processing between Scion areas means you no longer have to manually switch between areas.
