# **INSOL TECHNICAL DATA SHEET**

## **PLAN VIEW**

## **SECTIONED VIEW**

#### **Configuration and layout:**

- The louvre blades can be set at any centres.
- No tilt can be set to the blades with this system blades must be set horizontally.
- Once installed, the louvre blades are fixed in position and cannot be altered.

## **Assembly and Installation:**

- The louvre blades are drilled and threaded on to the stainless cable prior to the fitting of the tensioning fork to the end of the cable.
- Once the stainless cables are fitted to the support structure and tensioned correctly, the louvres are positioned and locked in place with clamping rings on either side of the blade.

#### **Structural Requirements:**

- Cables and supports are required at centres appropriate to the wind loading on thelouvre blade. See Span Data Table for spans relative to wind zones.
- The stainless cables must be tensioned to a degree that prevents any flex under wind load on the louvre blades. This tension must be calculated on a project specific basis, and the support structure must be engineered to withstand the loading applied.

#### **Componentry and Finishes:**

- Insol recommends the use of Ronstan stainless steel cable and components. Technical literatur e can be obtained from www.ronstanrigging.com
- Contact Insol for advice on the correct cable componentry to use on each specific project.
- All the aluminium components (the louvre blade and end caps) can be finished with any exterior powder coat or grade of anodising.
- The stainless components are typically supplied in a polished or brushed stainless finish.

Not sure if this is the correct fixing detail for your project? Contact Insol to discuss your requirements - we will be able to recommend the most suitable fixing methods for your specific scenario.
