

Propane Gas Dryers

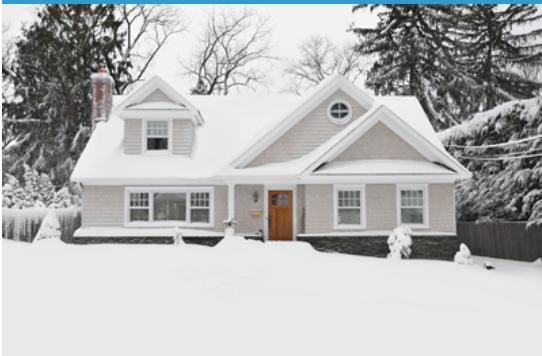

Why pay for time-of-use on your electricity bills? Don't allow your bills to dictate the time of day that you are able to do laundry. Why not reduce your hydro bills altogether by installing a propane gas dryer? Contact your local heating contractor for more details.

Cap and Trade Effective January 1st

The new Government of Ontario Cap and Trade system is going into effect on January 1st, 2017. This is going to affect all forms of electricity, natural gas, propane and other heating fuels. While we aren't currently sure what the total amount will equate to, it will be between 0.027 - 0.03 cents per litre.

We will be separating the Cap & Trade tax on delivery meter tickets / invoices as a separate line item, but due to some back-end setup required, this may not happen for a month or two.

Please contact us if you have any questions. 1.888.405.7777

NEW! Customer Web Portal

Are you tired of trying to keep track of your deliveries and payments? Try something easier. Sign up and create a customer account. You will have the ability to:

Winter 2016 - 2017

Budget Propane Newsletter

Expand Your Use of Propane This Winter!

We love our customers, so let us help you save money this winter! Did you know electricity rates for time of use increased November 1st? Electricity bills are the highest during the winter season, so this couldn't have come at a worse time. Did you know that propane can not only power furnaces and heating sources, but they can also power dryers, water heaters and ranges? Imagine not having to be concerned about the time of day you are doing laundry. Remove that worry by switching more appliances to propane.

Winter is a busy time for us and our drivers are ready to serve you. I'm very proud that our staff is focused on customer service, and ready to take on the winter conditions. We look forward to providing 'home comfort and peace of mind' to you and your family with reliable propane service.

Best wishes for a safe, happy winter!

James Callow, President

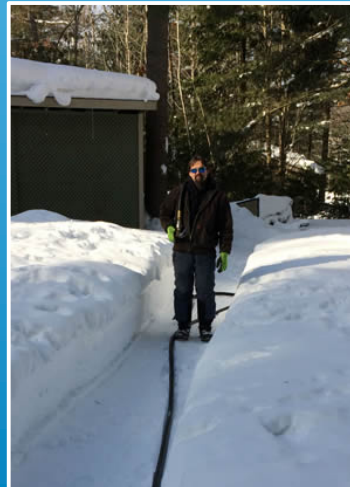

Winter Service Tips

Help Us Help You!

This winter, we ask that you keep an eye on the conditions around your propane tank and make sure there is safe shovelled path, clear of snow and ice, for when our drivers come to make deliveries.

Also, please keep your tank clean of snow and ice build-up and have your driveway cleared and sanded. Safety is our primary concern and we are proud of our reputation for Central Ontario deliveries.

Get Ready For Winter!

Winterizing can help you avoid being caught without heat, hot water, or the ability to use your stove in the cold months ahead! Regular maintenance also maximizes operating efficiency, improves comfort levels, lowers energy costs, and saves you money on fuel. Don't wait until the temperature drops. Here's a handy checklist for getting your home ready.

1. Have your furnace inspected and make sure your appliances are in good working order (including your propane gas fireplace!)
2. Check your Carbon Monoxide & Fire Alarms
3. Remember to fill up your propane tanks!
