## Improved Pharmaceutical Supply Chain Visibility

The IntelliGuard® Vendor Managed Inventory System offers RFID-enabled Smart Cabinets™ for manufacturers and distributors to securely store temperature-sensitive items, track inventory levels and enable consignment programs.

Placed on site at your client locations, Smart Cabinets™ automatically update inventory levels each time your product is removed and the door is closed. A web-based portal provides real-time visibility to determine minute-by-minute product usage and detect shortages against PAR. Alerts notify you of temperature excursions or soon-to-expire inventory.

### Supply Chain RFID Solutions

Optimize and manage global distribution and inventory consignment programs:

- Gain visibility and control of your remote inventory
- Confidently enable direct consignment
- Realize revenue increases and facilitate auto-replenishment
- Monitor storage temperatures of critical inventory
- Manage shortages, reduce expiry waste and track recalls

### Size and Temperature Settings to Fit Your Needs

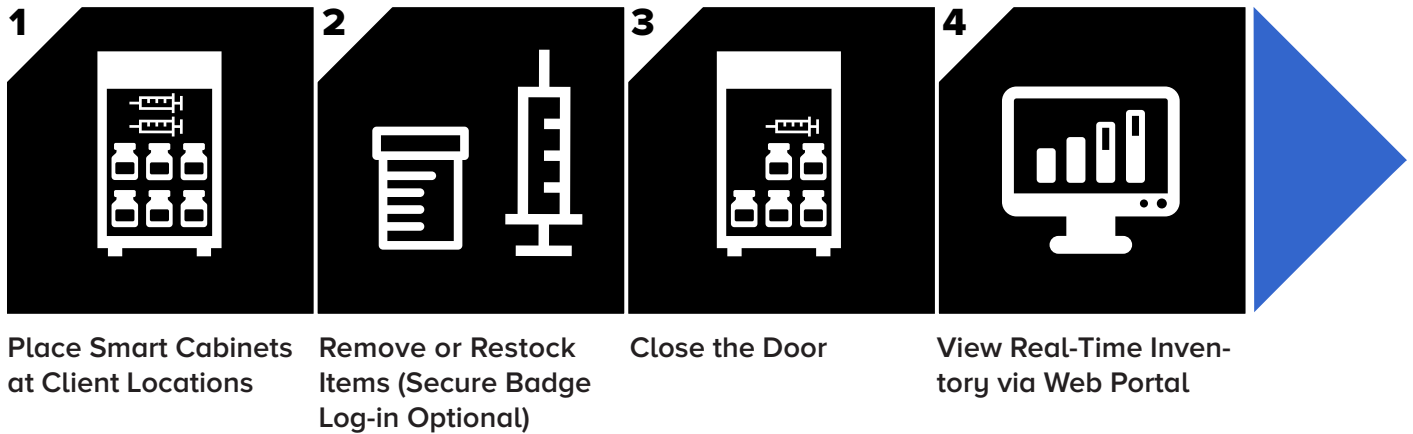

IntelliGuard® Smart Cabinets™ are available as ambient or with pre-set temperature settings for Cold (2° - 8°C) or Controlled Room Temperature (20° - 25°C) storage. A variety of cabinet sizes are available to fit your space and storage needs ranging from small under-counter to large capacity models.

VMIS™ auto-captures data on every product removed or returned each time a cabinet door is closed, so you can:

- Track inventory levels in real-time remotely.
- Understand usage by location and customer.
- Monitor storage temperatures of critical inventory.

# HOW INTELLIGUARD® VMIS™ WORKS

## Supply Chain RFID Solutions.

### Confidently Monitor Remote Inventory

With the IntelliGuard® Vendor Managed Inventory System, you can confidently monitor remote inventory and track products as they are used – with no manual counting or other on-site inventory reconciliation. Your client simply maintains their current workflow - open the door, remove what's needed, close the door. The IntelliGuard® Vendor Managed Inventory System is equipped with an embedded RFID reader that scans for RFID tags and updates inventory automatically, every time the unit door is opened and closed.

### Real-Time Visibility and Detailed Reporting

Detailed reporting provides data across your distributed client base as well as visibility into each specific facility or cabinet including product stock levels and reorder requirements, expiry information, and tracking of in transit inventory.

Access to specific product usage levels by customer allows you to eliminate carrying costs and invoice as products are used. Inventory details include:

- Item level tracking and utilization data
- Product stock levels
- Re-order requirements
- Expiry information
- Actionable data to support targeted sales focus
