Different Sizes. All Smart. RFID-Enabled Controlled Temperature Cabinets that Fit Your Pharmacy

INVENTORY MANAGEMENT SYSTEM

Hospital pharmacies are under increasing pressure to conserve costs while still maintaining adequate and safe pharmaceutical inventory. The Intelliguard® Inventory Management System uses RFID technology to provide accurate, real-time visibility for optimal management of high-value, critical dose drugs.

The Intelliguard® Inventory Management System monitors critical drug inventory levels and the conditions in which they are stored. RFID-equipped Controlled Temperature Cabinets automatically update inventory as it is removed or replaced and relay that data to the Intelliguard® Client Intelligence Portal for instant access to actionable inventory information in real-time.

RFID Technology Puts You In Control

- Increase security with access control and real-time visibility to user transactions
- Confidently reduce inventory and pre-paid inventory costs
- Improve patient safety by reducing stock-outs
- Manage inventory expiry details, storage temperatures and excursions at the item level
- Enable truly effective inventory control from the web-based Intelliguard® Client Intelligence Portal
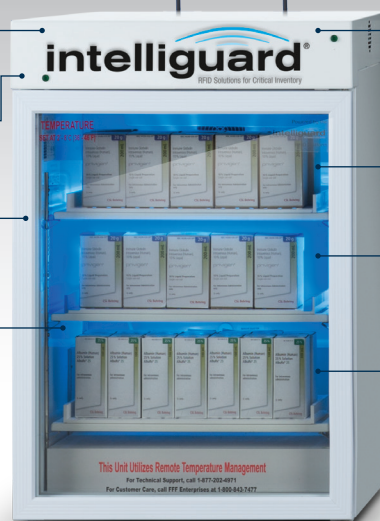

RFID-EQUIPPED MEDICAL GRADE REFRIGERATION

Ethernet, Wi-Fi or 3G/4G included with all installations

Optional integrated access control

RFID hardware embedded – no exposed equipment

Meets USP 797 requirements. Configurable temperature settings for Cold (2 - 8°C) or Controlled Room (20 - 25°C)
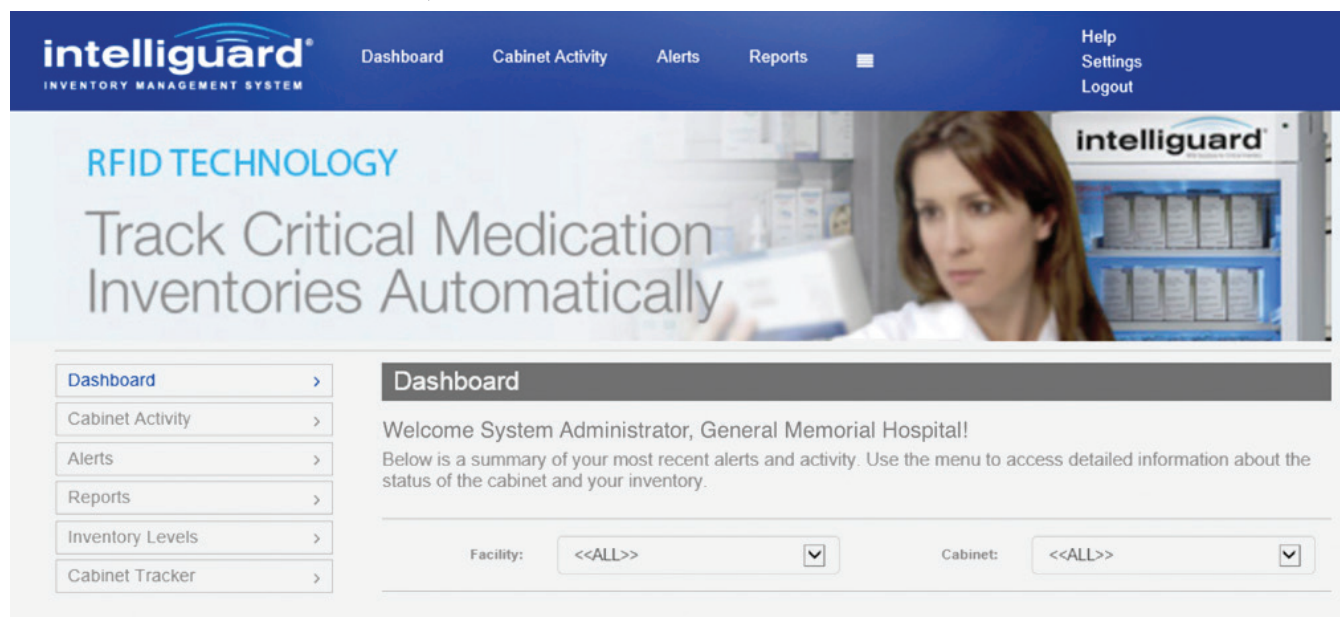

Real-time temperature monitoring, critical inventory alerts and reports are included

Glass and door shielding assures 99.9% read rate

Available in multiple sizes – from small under counter to large capacity models

Adjustable and fixed shelves accommodate from 50 to over 500 items

intelliguard®
RFID Solutions for Critical Inventory™

The Intelliguard® Controlled Temperature Cabinets

The Intelliguard® Inventory Management System provides one solution to store and dispense Cold (2 - 8°C) as well as Controlled Room (20 - 25°C) temperature medication.

Using the latest RFID technology, the Intelliguard® Inventory Management System provides real-time visibility to your pharmaceutical stock. With visibility like this, you'll be able to quickly find and remove expired or recalled medication, and identify shortages to avoid stock-outs that can put patients at risk.

Intelligent Inventory Management

Intelliguard® RFID Solutions keep you connected to your inventory through actionable alerts and reports:

- Inventory Levels
- PAR-Level Management
- Expiry Notifications
- Excursion Alerts
- Search Functionality
- Recall Management
- Temperature Monitoring
- Access Control Administration
- User Activity Reports

Visibility at Your Fingertips

The Intelliguard® Inventory Management System automatically sends data to a web-based portal so managers always know the current status of inventory in each cabinet as well as cumulative inventory across the enterprise. This perpetual visibility provides actionable data for inventory management:

- When quantities drop below PAR, the system can be configured to issue reorder alerts
- Staff can quickly search by lot number, medication name or manufacturer to find and remove recalled medications
- Advanced expiry alerts allow pharmacy staff to anticipate soon-to-expire medications and take action to prevent them from expiring unused
- Detailed temperature data and reports monitor the temperature range of each cabinet and alert on out of range situations to allow staff to respond quickly
- Temperature excursion alerts at item-level permit staff to quickly respond before medication is rendered unsafe or ineffective

Actionable information and real-time visibility – every minute of every day in every department.
