**OUR WORLD-CLASS FRACTIONAL  
DISTILLATION SYSTEMS**

## MARATEK'S FRACTIONAL DISTILLATION SYSTEMS

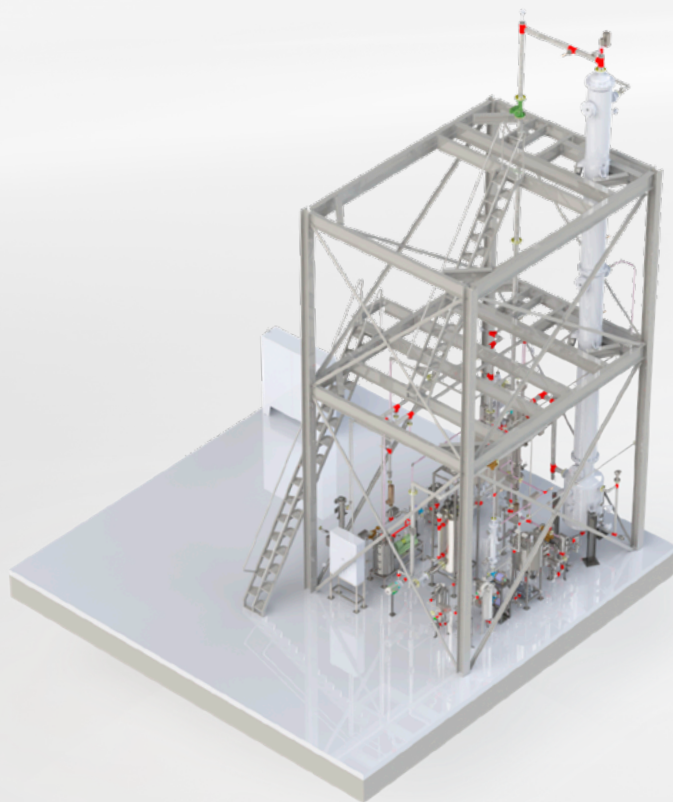

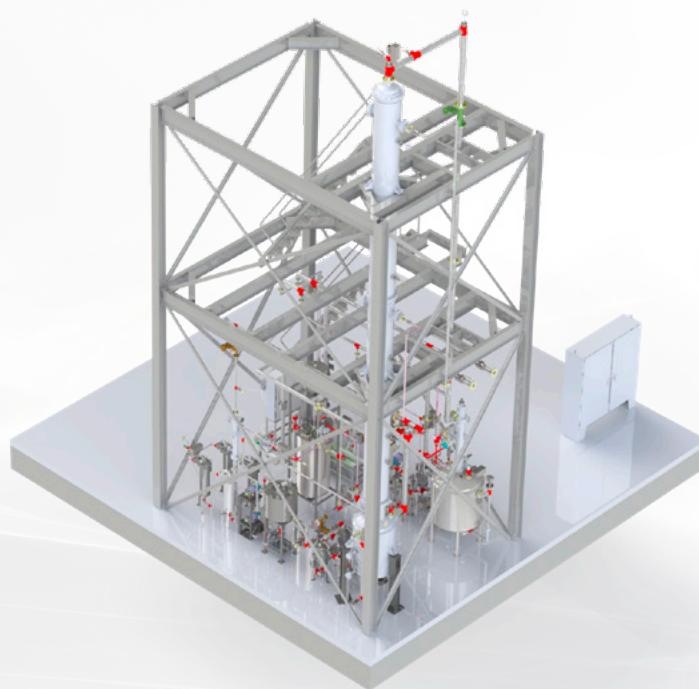

Maratek Environmental's uniquely designed "F Series" for automated fractional distillation helps break apart the hard to separate azeotropes and other compounds within your stream. Most commonly in the hemp and cannabis industry these are used to consistently de-water solvents (i.e. ethanol) and bring them back to a high grade before being reused in your extraction and/or winterization processes. These systems can also be designed to separate other undesirable components, particulates, and solvents from your stream, for which we can easily engineer and manufacture an "F Series" system specific to your needs.

We have used our 40+ years of experience professionally engineering and manufacturing fractional distillation systems for various other industries to perfect and tailor our "F Series" specifically to the Hemp and Cannabis industry.

Our fractional distillation “F Series” will help your business create a more efficient and cost-effective production process by reducing both solvent and operation costs. The “F Series” systems can also be easily integrated with Maratek’s other technologies as well as any other equipment in your facility, allowing you to streamline and automate your entire production process, with less variables, safe in the knowledge that you’ll create a consistent grade of solvent/ethanol (i.e. 95% or whatever purity your business requires) for your extraction/winterization process.

# About Maratek Environmental

Maratek Environmental is an award-winning industry leader in the solvent recycling and cannabis & hemp oil production industries. We strive for the highest safety and quality standards with our equipment all being Class 1 Division 1 certified, GMP compliant, and UL listed.

For over 40 years Maratek has been engineering & manufacturing environmentally-friendly products that recycle solvents for the printing, coatings, automotive, aerospace, food, and paint industries. Maratek's Cannabis Oil Tech division is a leader in the separation of cannabis and hemp oils from ethanol and other solvents, de-watering and filtration technologies, as well in providing engineering services to integrate systems and close loop the cannabis/hemp oil production process.

**"Our equipment enables companies  
to refine and process their cannabis & hemp oils  
to a higher-quality and at a lower cost  
to increase their margins."**

Colin Darcel, CEO
