

## ***iLite*<sup>®</sup> anti-HER2 ADCC Activity Set**

REF: BM5090

***For research use only. Not for use in diagnostic procedures.***

### **DESCRIPTION**

This product contains a packaged set of the three individual products, one vial of each:

- *iLite*<sup>®</sup> ADCC Effector (V) Assay Ready Cells (BM5001)
- *iLite*<sup>®</sup> HER2 (+) Target Assay Ready Cells (BM5011)
- *iLite*<sup>®</sup> HER2 (-) Target Assay Ready Cells (BM5016)

All three products are genetically engineered human cells to be used for measuring the ADCC activity of anti-HER2 antibodies. For more information about the individual cell lines, please consult the specific Product Specifications on [www.svarlifescience.com](http://www.svarlifescience.com).

### **CONTENT**

3 vials of *iLite*<sup>®</sup> Assay Ready Cells (>250 µL). For contents of the individual vials, please consult the specific Product Specifications on [www.svarlifescience.com](http://www.svarlifescience.com).

### **RECEIPT AND STORAGE**

Upon receipt confirm that adequate dry-ice is present, and the cells are frozen. Immediately transfer to -80°C storage. Cells should be stored at -80°C (**do not store at any other temperature**) and are stable as supplied until the expiry date shown. Cells should be used within 30 min of thawing.

### **BACKGROUND**

Antibody-dependent cell-mediated cytotoxicity (ADCC) is a mechanism whereby pathogenic cells are lysed by lymphocytes, most often Natural Killer (NK) cells. The mechanism involves binding of antibodies to surface antigens on the pathogen. Crosslinking of these antibodies to NK cells through the binding of the Fc-portion to Fc receptors on the NK cells leads to activation of the NK cell and formation of an immune synapse with the pathogenic cell. The NK cell releases cytotoxic granules containing granzymes and perforin into the synapse, leading to apoptosis of the targeted cell (1).

Breast cancer is the most common cancer in women worldwide, and the second most common cancer overall. Survival rates have improved in the recent years, and stratification of patients into subgroups has vastly improved treatment options for many patients. As an example, patients with HER2 positive breast cancer generally have a poor prognosis, but treatment with trastuzumab, a monoclonal antibody targeting the HER2 receptor, has shown to increase both overall survival and disease-free survival when given together with chemotherapy (2). Trastuzumab's mechanism of action is mediated in part by inducing ADCC when crosslinking HER2 positive cells with the patient's immune cells. The

## APPLICATION

drug was FDA approved for treatment of breast cancer patients in 1998, and many biosimilars are currently in development (3, 4).

The products included in the *iLite*<sup>®</sup> anti-HER2 ADCC Activity Set can be used for the quantification ADCC activity of anti-HER2 antibodies. Application note for the following assay is available:

- Quantification of anti-HER2 ADCC activity (LABEL-DOC-0402)

## PRECAUTIONS

For research use only. This product is intended for professional laboratory research use only. The data and results originating from using the product, should not be used either in diagnostic procedures or in human therapeutic applications.

The cells included in the *iLite*<sup>®</sup> anti-HER2 ADCC Activity Set are stable transfected cell lines of human origin classified as Class 1 Genetically Modified Microorganism. This is based on the conclusion that neither insert nor vector adds anything to the biosafety level since the cells cannot produce active virus. They should be handled in accordance with EU regulations (2009/41/EC) and disposed of in a licensed contained-use facility in accordance with these regulations. When used in accordance with the manufacturer's product specification, the requirements of EC Directive 2009/41/EC on the contained-use of genetically modified microorganisms are deemed to have been met.

## PROPRIETARY INFORMATION

Residues of chemicals and preparations generally considered as biohazardous waste and should be inactivated prior to disposal by autoclaving or using bleach. All such materials should be disposed of in accordance with established safety procedures.

In accepting delivery of *iLite*<sup>®</sup> Assay Ready Cells the recipient agrees not to sub-culture these cells, attempt to sub-culture them or to give them to a third party, and only to use them directly in assays. *iLite*<sup>®</sup> cell-based products are covered by patents which is the property of Svar Life Science AB and any attempt to reproduce the delivered *iLite*<sup>®</sup> Assay Ready Cells is an infringement of these patents.
