# RCxRules HCC Coding Rules Engine

RCxRules helps healthcare organizations improve RAF scores through increased HCC capture/re-capture rates. Our automation technology identifies high-value encounters with HCC coding gaps for concurrent coder review. This reduces the coding burden on providers allowing them and coders to focus on what they do best—deliver quality care and perform accurate coding. Integrating with leading EMRs and PM systems, our software ensures initial claims have the most accurate HCC data—every time, guaranteed.
