

Your Premier Web GIS Service and Geospatial Data Provider for State & Local Government

GISinc has been helping State and Local Governments maximize their investments in location technology for over 29 years. With a network of GIS experts across the United States, we bring expertise that has served over 500 government agencies, including 25 Esri Special Achievement in GIS award winners.

Cloud Services

GISinc provides organizations highly varied cloud offerings and managed services, ranging from very simple, consolidated deployment patterns to robust, fault tolerant and highly available systems. Let us help you with Architecture and Design, Cloud Environment Setup, Facilitation and Migration, Environmental Management, Server Monitoring, Software Upgrades, and Ad Hoc Support. Learn more [here](#).

Managed Services (Cloud/On Prem)

GISinc has been offering managed services for over a decade with extensive experience designing, implementing, and administering cloud architectures or working with our clients to devise on-premise management services. Our approach is adaptive and has proven to be successful for both small and large clients as well as across simple and complex environments. Learn more [here](#).

Data Collection

GISinc's state & local government clients can access the broad data collection capabilities now available via its acquisition by Continental Mapping in early 2021. Services include: aerial imagery, aerial lidar, mobile lidar and imagery, boots on the ground field collection, land survey, hydrographic survey, indoor mapping, UAS-mounted sensors, and a plethora of other data collection services. Learn more [here](#).

Utility Network

GISinc assists water customers prepare, migrate, and fully leverage the service-based architecture of the Utility Network. We acknowledge the UN represents a significant deviation from previous methods and requires a thoughtful and deliberate approach to help ensure organizational and technological readiness. GISinc offers Readiness and Data Assessments, UN Jumpstarts and Complete UN Implementations. Learn more [here](#).

Cityworks

GISinc specializes in translating organizational business process into the Cityworks framework, leveraging best practices supporting each organization's specific infrastructure and requirements. GISinc supports installation and configuration for the full Cityworks Suite, full system administration, knowledge transfer, training and ad hoc support. Learn more [here](#).

Premier GIS Consulting Services

- **Premier Services Program:** Get access to GISinc Premier GIS Services. A GISinc Technical Architect will work closely with you throughout the year to strategize, implement, and help you optimize your GIS investments. We begin with a discovery session where your organization's top priorities are identified. From there, we custom match our people and skills to exceed your needs and deliver quality solutions identified from the discovery session. We then focus on knowledge transfer, giving you and your team the reigns to run, support, and maintain your organization's GIS and location services program.

- **Health Checks:** The GIS Healthcheck includes a technical diagnostic of the GIS, an assessment of the business utilization of the GIS, and finally a prescription with suggestions for the future. The GIS Healthcheck is performed by GISinc staff and requires support from the client's GIS Department and key departmental stakeholders (i.e., GIS user community).
- **Jumpstarts:** Designed to provide organizations with quick wins supporting goals and initiatives. GISinc offers remote and onsite jumpstarts to support installation, configuration, head-to-head knowledge transfer and training for a wide variety of Esri Solutions. GISinc offers jumpstarts for Enterprise Deployments, ArcGIS Online, COVID Business Continuity, HUB sites, Utility Network, Cityworks, and more.
- **ArcGIS Hub:** GISinc will help your organization setup, implement, and launch ArcGIS Hub. Our services will include the development of your community profile, enhance the site creation process, expand dashboards for tracking engagement, and make it easier for the community and staff to leverage the information.
- **ArcGIS Indoors:** GISinc can support your organization to configure a complete system for indoor mapping and location analytics used to create a connected workplace, providing a common operating picture for executives, workplace services personnel, and other employees and visitors to understand, manage, and use their workplace environment.
- **Field Solutions & Mobility:** GISinc assists organizations to improve coordination and operational efficiency for those in the field. If you are still on paper, let GISinc assist your organization to a modern platform that leverages your existing GIS data to offer contactless solutions that boost productivity, minimize errors, and save operational funds.
- **Business Integrations:** GISinc supports singular or bi-directional integrations with existing business systems, allowing organizations to maximize their investments and achieve full utilization of their GIS system, business systems, and other enterprise applications. GISinc has supported integrations with a variety of different systems to include financial systems, plan review, document management, CSM, billing systems, CCTV, SCADA, AVL, work smarter initiatives, and more.
- **MapMasq -** MapMasq™ allows users to create locationally representative point files for analysis while preserving the anonymity of Patient Health Information (PHI) and Personal Identifiable Information (PII). Learn more [here](#).
