

# Integrated Planning & Reporting Solution for Government

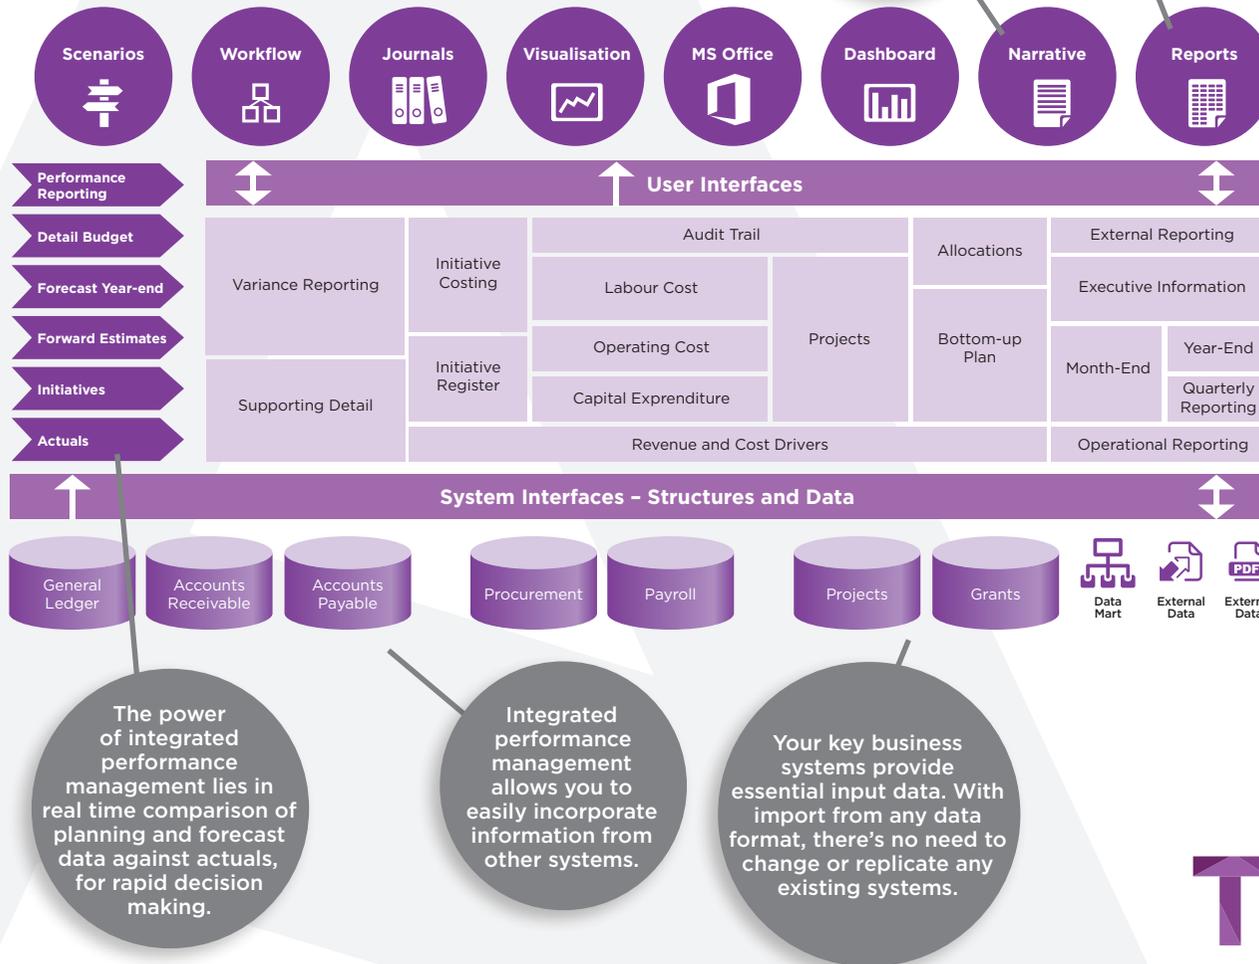

The accelerating pace of change in economic, business and government environments demands equally fast reaction times – quick decisions, but they must be the right decisions based on reliable information and efficient processes.

With ever tighter budgetary cycles and constant demands for improved service delivery to the community, pro-active involvement from the role of Finance has never been more important. This involvement is driving a culture of accountability down the line, enabling better decision-making and effective delivery of government policy.

The Planning & Reporting solution from Tridant is:

- specifically designed for government departments and agencies
- fully compliant with government standards as set by Treasury
- designed to allow the solution components to be easily transferred between like-for-like government departments or agencies, saving significant implementation costs
- optimised to deliver tangible business benefits to improve efficiency, increase effectiveness and promote sustainable use of available resources.

Tridant's 'Fast Start' approach to integrated planning and reporting offers staged implementation – increasing user adoption and transforming government environments for fast results and rapid ROI.

## Tridant's Integrated Planning & Reporting Solution for Government:

- simplifies the steps involved in delivering the information required to manage current and future funding arrangements
- redefines the role of Finance Managers, allowing them to spend less time on data preparation and more time on analysis
- replaces out of date technology and skills with new techniques, methods and support arrangements to improve efficiency and reduce system reliability risk
- enables broader business involvement across all processes including planning new initiatives, formulating forward estimates, creating detailed budgets and reporting on progress.

## Delivering your business units:

- self-service Reporting and Analysis, reducing the dependency on other divisions.
- alignment between government planning and reporting processes, both internal and external.
- the ability to track the flow of funds through audit trails
- automated integration between people, processes and systems to reduce the volume of low-value, routine work.
