

2D Multi-client Program Egyptian Red Sea (RS18)

Data Licensing Opportunity

The unexplored offshore Egyptian Red Sea area presents an opportunity to explore, large untested structures in close proximity to well-established hydrocarbon systems, offering exceptional growth opportunities for oil companies. The new multi-client 2D seismic acquisition program is the initial bold step in mitigating the complex salt imaging challenges within this frontier basin.

Fast track products are available now, ahead of anticipated future Licensing Rounds. Final PSDM products will be available Q1 2019.

Next Steps

Opportunities to commit to this regional long offset broadband 2D survey are currently available. To benefit for preferential license fees, please contact TGS or Schlumberger for more information.

Key Acquisition Parameters

Acquisition Start	December 2017
Full Fold Km	10,318 km
Streamer Length	12,000 m
Streamer Depth	18 m
Source Volume	4,310 cu-ins
Source Depth	8 m
Shot Point Interval	25 m
Record Length	14 sec
Sample Rate	2 ms
