## Telephone Time Tracking

### EASILY TRACK YOUR WORKFORCE FROM ANY TELEPHONE

In a nutshell, Fonen™ telephone time tracking allows employees to clock in and out via any landline or cell phone. Employees simply call a toll-free number and follow the prompts.

Using Integrated Voice Response (IVR) technology, Fonen collects live time and attendance data, which is stored in Blueforce and accessible in real time.

Fonen is easy to set up and deploy, like every aspect of EPAY's time and attendance system!

### Easy for Employees

Interactive voice prompts guide employees through the clock-in/out process. In just a quick phone call, employees can clock in and out for shifts, meals and breaks with instant confirmation of punch details.

### Hard to Outsmart

In addition to capturing the date and time employees clock in and out, Fonen requires employees to call in from a registered telephone number. Thanks to real-time visibility in Blueforce, managers can tightly manage remote employees, monitoring late arrivals, absences and more.

### Highly Adaptable

Fonen telephone time tracking is ideal for tracking small groups of workers, or those who move from site to site. The system is customizable, so you can set up automatic lunch deductions and more. Fonen can be used in conjunction with our biometric time clocks, mobile time tracking app with GPS and online time tracking options.
