

## Yusen Logistics’ productivity tool

Continuous improvement is key to keeping ahead in logistics. So as lead times grow shorter and the pressure mounts it is essential that Yusen maintain the ability to respond to the needs of the consumer electronics market.

Productivity visibility is a key component of our operational excellence and drives improvement through our Kaizen Culture. Yusen have developed an in-house productivity tool app to measure and capture our performance. The tool enables us to manage a variety of areas within the operation:-

- Cross check our charging matrix
- Ensure we are utilising ourselves as efficiently as possible
- Control our processes as much as possible
- Calculate a true improvement cost
- Potentially initiate gain share

Our productivity related approach is supported from Business Unit Director to Shopfloor – we can show this through a 93.9% average adoption rate on productivity tool start up.
