The PDi-IPS Android™ based interactive system (PDi-IPS) satisfies patients and family members with easy access to a selection of facility-approved Apps that provide access to patient education, patient portals, information about safety and facility services, Internet browsing, expanded entertainment, and standard TV. The PDi-IPS offers software tools to improve staff efficiency and satisfy nurses. Available on secure PDi healthcare-grade patient television systems, PDi-IPS has an Open System Android 4.3 operating system with the flexibility to allow third-party Apps and patient downloads.

PDi offers these Advantages versus Competing Interactive System Providers:

- PDi-TAB2™ 14" arm-mounted devices offer an easy touchscreen user experience for all ages
- Turn-key out-of-the-box, yet scalable and customizable interactive bedside solution
- No back-end server investment means a lower average "cost-per-bed"
- Camera/Mic option on PDi-TAB2™ for telemedicine or video-conferencing like Skype™
- No special personnel needed to implement or maintain the system
- PDi-STORE™, to browse, buy and manage commercial value-added software for multi-user PDi-IPS healthcare devices

PDi-IPS is a simple, cost-effective, and scalable solution. The PDi interactive patient system is available on the 14" PDi-TAB2™ arm-mounted touchscreen patient TV, and there is also the PDi Module for Android™ on PDi E-Series LED wall-mounted patient TVs (24" thru 42") controlled via a wireless medical-grade keyboard.
