

PDi Bedside System

The simple approach to meaningfully engage with patients

"...severe headaches made it difficult for my father to wear his glasses, but the TV swing arm allowed him to pull the television close and alleviate his boredom between visits from family and friends."

– Rich C., OH

Interact at the bedside.

PDi's bedside technology solutions create intimate personal environments where patients feel at ease while viewing personal health records, video conferencing with doctors or loved ones, and accessing social networks.

Reduce back, neck and eye strain.

Allow the patient to easily adjust their viewing experience away from glare and to where it's most comfortable in their current position.

A bigger experience.

A smaller screen, doesn't equate to a lacking entertainment experience. A 14" to 19" display mounted in close proximity to the viewer is equal to a 90" screen across the room.

Stability and security.

A securely mounted display deters theft and eliminates the risk of a device being damaged by gravity.

Unparalleled Range of Motion

1000 Series Arm

The Longest Reaching Arm in the Industry

Wires: Out of sight. Out of mind.

Make the patient room a clean, cable free zone. PDi arm mounted systems are engineered to store power cords, ethernet cables, coax and more within the arm for continuous power and connection so the patient won't experience any interruptions.

A broad range of motion.

With just a light touch, PDi's arms lift, swing, tilt, rotate or retract to free up space.

500 Series Arm

The Lean Solution, Without Sacrifices

400 Series Arm

The Durable, Yet Versatile Arm

The most customizable solution in the industry.

PDi's innovative design allows arms to be mounted to headwalls, counters, floors, ceilings, chairs and more.

PDi will even bring their engineering expertise to your project to ensure this system will work in your unique environment.
