Six Reasons for Microsoft Office 365 Backup

Presenter: Russ Kerscher, Senior Global Product Marketing Manager for Veeam Software

Moderator: Brad Sams, Petri IT Knowledgebase, Executive Editor at Petri.com

Overview

As a robust and highly capable Software as a Service (SaaS) platform, Microsoft Office 365 fits the needs of many organizations, providing application Availability and uptime to ensure users never skip a beat. But when it comes to protecting your Office 365 data, it's easy to get confused with who's responsible for protecting which part of your environment. Ultimately, you need to ensure that you have access to and control over your Exchange, SharePoint and OneDrive for Business data.

Context

In this webinar, you will learn what the Office 365 shared responsibility model actually means for your business, the limitations of unlimited archiving and litigation holds, and also see how you can protect your data from outages and many other scenarios.

Key Takeaways

Six Reasons Why You Need an Office 365 Backup

Despite Office 365 running in the “cloud”, there are at least six reasons you need an Office 365 backup. This falls into the shared responsibility model that comes with the service as Microsoft is not responsible for your data in all scenarios.

6 Reasons WHY you need an Office 365 backup

The reasons you need to think about your Office 365 backup process include scenarios like accidental deletion, retention policies, internal/external security threats, compliance, and migrations as well. Microsoft does not natively provide all the backup services that you may need for your business which means it is important to outline the scenarios that impact your business to make sure that you are protected.

Retention Policies

When using Office 365, you need to understand the policies that Microsoft has implemented to know when and where you may be vulnerable to a compliance or internal/external threat.

Crucially, for items deleted in SharePoint or OneDrive, after 90 days, that content is permanently deleted. Or, if an employee leaves the company, after 30 days, that data is gone as well. In both scenarios, the only way to recover the data after the deletion period is if you have your own backup.

Retention policies: What exactly does Microsoft back up?

Office 365 backup and retention policies can **only protect you from data loss in a limited way** and are not intended to be a complete backup solution.

Retention policies are always evolving and tend to be **very complicated to manage and monitor**. Commonly, Admins believe they are covered, only to find that in fact certain items are gone.

Sources: Exchange Online information above is based on Microsoft's [default MRM Policy](#). SharePoint Online information above is based on Microsoft's [support article](#). OneDrive for

And because they are policies, these timelines could change in the future. It's important for admins to understand and know these limitations to make sure that your data is available at all times, even if Microsoft is no longer storing it.

Veeam Office 365 Backup

As you would expect, a proper backup tool for Office 365 will keep your data protected until you decide that it is no longer needed. Veeam Backup for Microsoft 365 is more than simply filling the gaps, it's about providing access and control to all of your Office 365 data.

Retention policies: What exactly does Microsoft back up?

Veeam Backup for Microsoft Office 365 is more than simply filling gaps.

It's about providing access and control to ALL

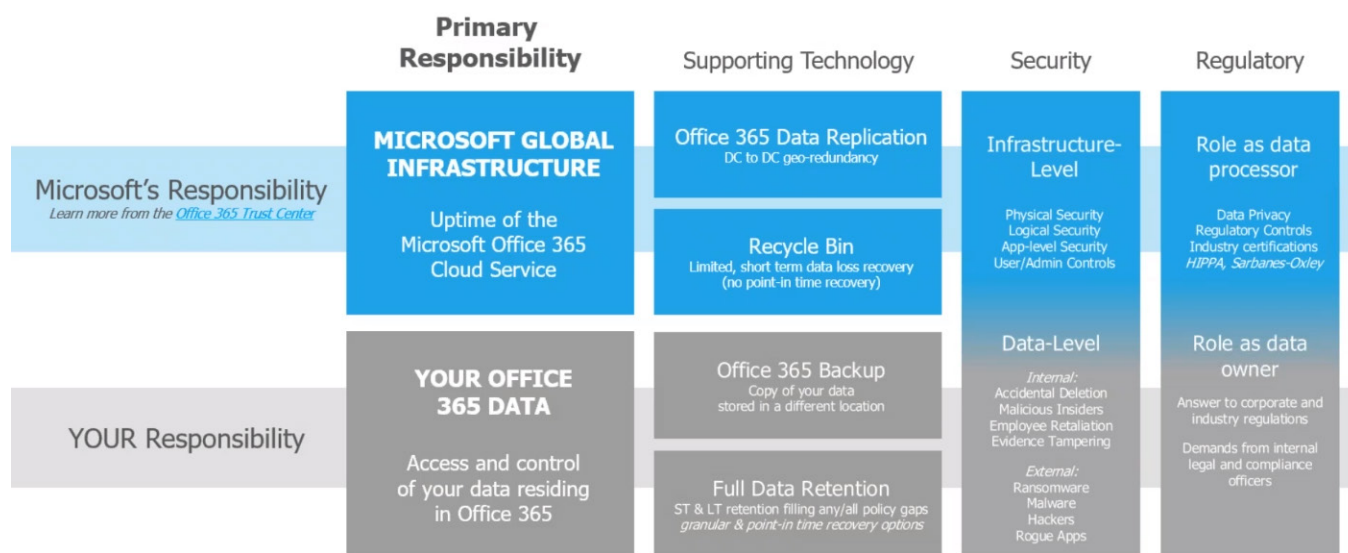

Exchange Online, SharePoint Online and OneDrive for Business data and **storing it in one location, making recovery fast, easy and reliable.**

Microsoft does a good job at providing quality uptime for Office 365 but it's up to the customer to make sure their data is available when and where it is needed.

The Share Responsibility Model

In the Webinar, Russ does an excellent job of breaking down what Microsoft is responsible for and what the customer is responsible for when using the service.

The Office 365 Shared Responsibility Model

Veeam's Office 365 Backup Solution Provides Flexibility

Without a backup of your data, you have limited access and control of your own data, retention policy gaps, data loss dangers, security vulnerabilities, and potential regulatory exposure.

Further, the solution from Veeam simplifies the process to make it possible to quickly restore individual Office 365 items and files with industry-leading recovery flexibility.

Industry-leading recovery flexibility in NEW Veeam Backup for Microsoft Office 365 v2 | **25** unique ways to restore Exchange, SharePoint and OneDrive for Business data!

Exchange Online and Exchange on-premises

1. Restore Exchange item to Exchange Online mailbox or calendar
2. Restore Exchange item to on-premises Exchange mailbox or calendar
3. Email Exchange item as an attachment
4. Save Exchange item as a MSG
5. Export folder, item or mailbox as a PST
6. Service Provider restore of an Exchange item for a tenant
7. Entire folder/mailbox complete and restore of missing/changed items

SharePoint Online and SharePoint on-premises

8. Restore this Library document to SharePoint Online
9. Restore this Library document to on-premises SharePoint
10. Email SharePoint object as an attachment
11. Save SharePoint object as a file
12. Save multiple SharePoint objects as a ZIP
13. Restore an object to a prior version
14. Service Provider restore of a SharePoint object for a tenant

OneDrive for Business

15. Restore users, folders or files (including OneDrive rooted to OneDrive for Business)
16. Email as an attachment
17. Save files or folders
18. Save multiple files or folders as a ZIP
19. Restore any file to a prior version
20. Restore and overwrite users, folders or files
21. Restore but keep original users, folders or files
22. Restore with extended attributes and custom access controls
23. Restore without extended attributes and custom access controls
24. Service Provider restore of a OneDrive file, folder, or user for a tenant
25. Restore data located in Microsoft Teams*

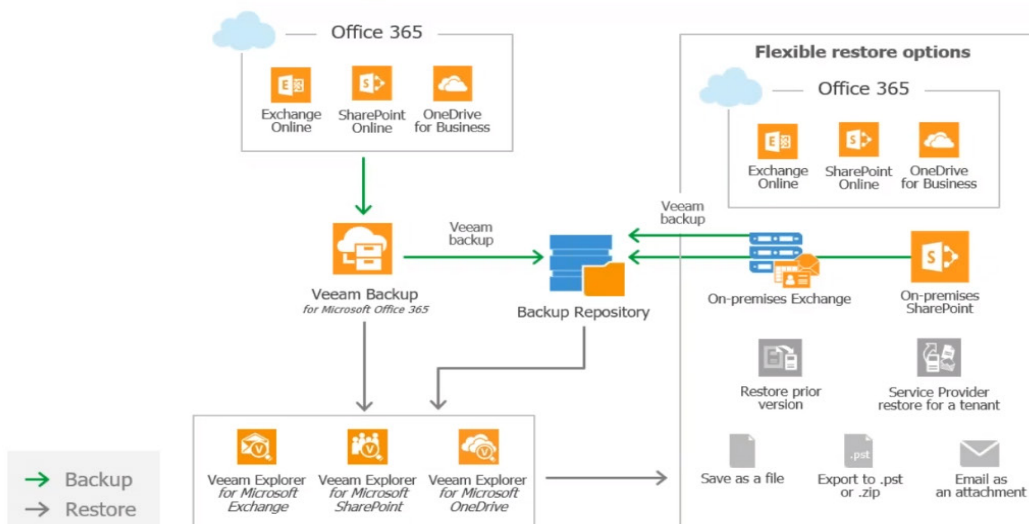

*You can protect Microsoft Teams when the underlying storage of the Teams data is within SharePoint Online or Exchange Online. While data can be protected and restored, the Teams tabs and channels cannot. After restoring the items, it can be reattached manually.
