NEED MORE WAREHOUSE SPACE? DON'T MOVE, DO THIS FIRST

Moving to a new space is expensive and can be a big gamble. If the economy takes a downturn or business needs change, you could end up paying for a lot of space you don't need. Unintended consequences, such as replacing staff members who don't want to commute to the new location, further increase the financial consequences of moving.

WAREHOUSE OPTIMIZATION TECHNIQUES

INSTALL A MEZZANINE

A mezzanine is an elevated platform between the floor and the ceiling, usually constructed from structural steel. The space beneath it can be used for storage while the mezzanine itself can be used for inventory overflow, slow-moving SKUs, a modular office, etc.

CONVERT TO NARROW AISLE OR VERY NARROW AISLES

By bringing aisles closer together, you can increase storage space by 30 - 50% and avoid the risk and costs of buying or leasing a bigger space.

RECONFIGURE INVENTORY OR PALLET RACK

Converting to a different pallet racking system can also improve capacity and efficiency. Switching to double-deep or drive in/drive through racking can increase storage space by 40 - 75%.

Before you decide to move, consider these simple steps that can help you **avoid making a potentially risky and costly decision.**

Still not sure? Our team of material handling consultants can provide the solutions you need. Contact us online, by phone at (800) 226-2345, or in person at one of our **nine locations.**
