

IT Health Check

A Holistic Approach to Aligning IT and Enterprise Strategy

In today's evolving healthcare landscape, IT organizations are required to drive more value from assets, while cutting costs and doing more work with the resources they have. As a result, true IT optimization that produces strategy alignment, improved efficiencies, and high performing teams is often a challenge.

INCREASE EFFICIENCY AND REDUCE COST

To help IT leaders optimize their technologies and organizations, Leidos Health has developed the IT Health Check. Our IT Health Check provides IT leaders with a comprehensive understanding of their IT environment and a targeted action plan to optimize their organization. With a holistic focus on assessing and strengthening the four foundational pillars of IT, we enable leaders to better align vision and strategy, prioritize strategic objectives, and cost-effectively support those objectives over the long term.

STRENGTHEN YOUR IT FOUNDATION

The IT Health Check examines four areas critical to IT success: Governance and Strategy, IT Operations, Organizational Staffing, and Technology. With a review and assessment of these areas, Leidos Health will provide IT leaders with a complete picture of their environment and identify areas to optimize performance.

IT Health Check Foundational Pillars

601-LH-03

5 COMMON IT CHALLENGES

- 1 Managing overwhelming demands for resources and competing priorities
- 2 Demonstrating value from significant IT investments
- 3 Handling increasing resource costs
- 4 Achieving cost savings while increasing IT efficiencies
- 5 Optimizing technology, identifying security gaps, and reducing risk footprint

EVALUATE AND OPTIMIZE YOUR IT HEALTH

Leidos Health offers a unique combination of knowledge, expertise and breadth of talent to help our clients successfully evaluate and optimize IT performance. To develop our IT Health Check approach, we have leveraged our years of solution and delivery experience along with our strategy, planning, technology, operations, and project management expertise. We will work with you to assess your organization's IT health and help you develop a roadmap that supports your organizational goals.

Governance & Strategy

Governance and strategy are the foundation of effective decision making when transforming an organization. The IT Health Check assesses whether IT has the right leadership, governance structures, and processes in place for IT-enabled strategies and IT-driven transformation.

IT Operations

Operational efficiency and effectiveness are vital when burdened by competing priorities in a complex and changing environment. The IT Health Check enables organizations to make data driven decisions that lead to financial and resource cost savings. Through our proprietary tools, we help organizations understand the true cost of their assets and projects, while also providing prioritization of projects and more efficient use of resources.

Organizational Staffing

The IT Health Check provides a benchmark of your existing IT skills against your peers and actionable recommendations to reduce costs, develop staff, and prepare for future needs.

Technology

Creating value while achieving competitive advantage is critical for healthcare organizations. The IT Health Check helps achieve this by aligning technology and business strategy. Our experts will help you realize maximum value, understand technological opportunities, minimize weaknesses, and build a roadmap for enterprise transformation.

IT HEALTH CHECK BENEFITS

- ▶ Align IT with the organizational strategy and goals
- ▶ Implement IT strategic objectives economically and efficiently
- ▶ Establish an IT governance framework that periodically reprioritizes IT investments and project portfolios
- ▶ Enable information driven and expedited decision making
- ▶ Build project management and change capabilities across the organization
- ▶ Identify, understand, and perform relevant operating performance measurements based upon business strategy and objectives
- ▶ Provide transparency and actionable intelligence around all IT assets to enable identification of cost savings and burdensome systems
- ▶ Reduction of duplicate services and antiquated work-around processes to improve quality and minimize cost
- ▶ Increase interoperability of efficient data driven warehousing, care coordination, health analytics, and clinical health information exchange
- ▶ Reduce IT operating and resource costs through strategic competitive analytics
- ▶ Maintain HIPAA patient privacy and security standards while providing secure access and utilization of health information from multiple sources
