

Simplify your skin checks

MoleScope offers a variety of features designed to simplify your skin checks so you can have peace of mind. So what exactly can MoleScope do?

Some of the most useful features are:

- **3D Body Mapping:** track and locate your moles by placing them on the 3D Body Map
- **Consultation:** (if available in your region) share your images with a dermatologist or doctor and receive private feedback without long wait times
- **Skin Check Guide:** analyze your photos for warning signs by using the educational ABCD analysis tool
- **Monthly Reminders:** set notifications so you'll know when it's time for your next skin check up

Tracking your moles has never been so easy! Each month you can get a reminder that it's time for your skin check. You can snap pictures of your moles, add them to the intuitive 3D Body Map, analyze them using the helpful ABCD guide, then send any suspicious spots off to your doctor for consultation. Even if the consultation feature isn't available in your region the app can still help you with your doctor visits; show him/her your images to help document your condition more accurately while saving time! This not only keeps your skin healthy and safe, but also provides you and your loved ones with peace of mind.

Share your MoleScope!

Your MoleScope doesn't have to be just for yourself! Sharing really is caring. One device can be used for an entire family to ensure that all members are receiving the skin care they need. This way, you have someone to help you with your skin checks, save costs, and ensure your loved ones have healthy happy skin too.
