

Overflow Now Opposite the Outlet as Standard!

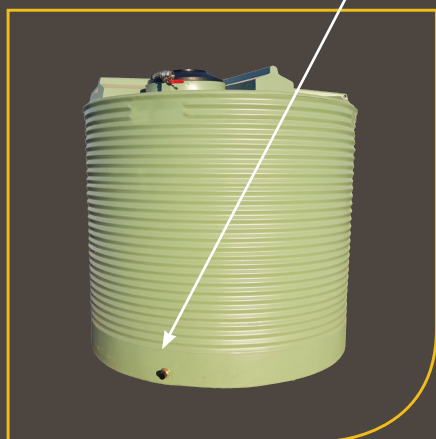

You asked, **we listened!**

After commonly getting asked to have overflows on standard tank fit-outs to be fitted opposite the outlets we have actioned this on our Premium and Flatwalled Tanks.

The old way we were fitting out our standard tanks had the overflow and the outlet on the same side.

The new way all standard Premium and Flatwalled tanks are now fitted as standard is as per below:

Outlet and Overflow now on opposite sides

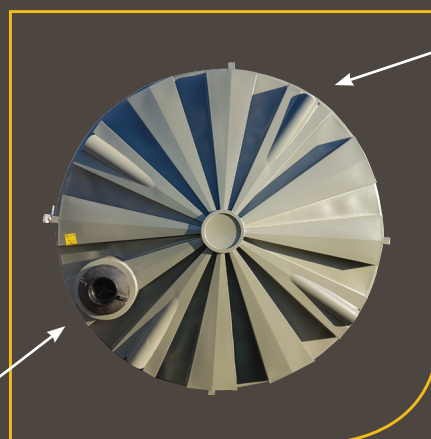

**12:00 (Twelve O'Clock)/
Manhole Side**

6:00 (Six O'Clock) Side

Some overflows are fitted into the ribs of tank roof which are not exactly opposite

Outlet fitment area

Overflow fitment in Roof Rib
