

ANTI-TAMPER THRESHOLD SEAL Sureseal

Our threshold seal is perfect for providing improved confidentiality in interview or tribunal rooms, or creating more peaceful bedrooms.

It's also the only product of its kind specifically designed for Mental Health. We made it because we understand the challenges of such environments, so we knew if we wanted to address noise reduction, we also had to completely reinvent existing seals to meet every anti-ligature and anti-tamper standard.

To do this, we based the design on our anti-barricade door, with the rubber seals coming in small sections. They're then fitted into the unique extruded carrier from the top, ensuring that when it's fitted to the door they're securely clamped in place using staggered anti-tamper screws. Fire and acoustic rated, it's not just best in class, it's a whole new product category for Mental Health — and yet another first from Safehinge Primera.

IN DETAIL

Shortened rubber fins reduce risk of ligature

Staggered double-fin design allows maximum number of fixings to prevent tampering

For total reassurance, rubber fins are inserted top-down, then clamped in place when acoustic threshold seal is fitted to door

DESIGNING FOR RECOVERY

Use on interview or bedroom doors to give service users a sense of empowerment and the confidence to chat freely without being overheard. Using on bedroom doors also eliminates noise from corridors and neighbours, bringing peace and quiet and encouraging a good night's sleep.

SUPERIOR SMOKE SEAL

Because we've designed our products for the real-world and spent time listening to our customers, we understand the importance of creating meaningful smoke compartments in corridor and bedroom areas.

That's why our threshold seal provides a superior smoke barrier and why it's tested and rated up to FD60. So designers can select a threshold seal which minimises noise transfer – providing confidentiality and privacy – as well as keeping service users safer.

Seal is on the leaf on the closing edge and built into the frame on the hanging edge, providing a near-continuous smoke barrier

Seal runs the length of the top edge, providing maximum safety

Smoke seal options:
Dual rubber
or brush fin

Our anti-tamper threshold seal runs along the bottom, minimising smoke transfer
