

This **smartphone app** for Android smartphones **simplifies** the process of starting a TPA (Timed Personal Alert) **check-in timers** and managing timer reminders.

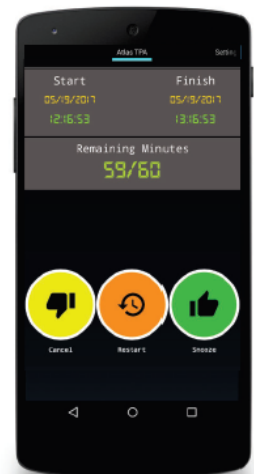

When the timer is started the user will receive a **confirmation message** stating the start time and the number of minutes the timer will run for.

Up to 4 reminder notifications are given to the user. Users can extend or cancel the timer at any point.

If the user fails to stop the active TPA, an **alert** will be **automatically generated** and sent to nominated responders.

Because the timers are running on a server and **not reliant on** the app or phone an alert will still be generated even if the phone is out of **mobile coverage**, switched off or damaged.

Atlas TPA Smart gives users additional peace of mind throughout their normal working day.

Overview

Main Points :

- Quick start TPA check-in timers
- Add notes to TPA timers
- Send GPS position on activation
- Send updated GPS position at reminder intervals
- Receive local reminders of a pending TPA expiry
- Send updated GPS position if timer expires

Extended Features:

- Simple and easy to use
- Operates in the background
- Displays colour indication of time remaining before escalation
- Warning sound a preset intervals
