

CASE STUDY

American Institute for Foreign Study Increases Efficiency and Enhances Analytics with BizInsight

CHALLENGES

- High volume reporting environment
- Needed to generate and analyze large quantity of unique reports
- Difficulty producing useful and understandable reports to the management team

SOLUTION

Operating with multiple divisions and departments, AIFS creates many unique reports in order to analyze financial data. “A significant amount of time each month was spent creating the spreadsheets and customized reports we needed to analyze the numbers,” says James Mahoney, VP of Finance at AIFS. “It was difficult for our team to create reports that were useful for management.”

AIFS implemented BizInsight after they realized that FRx, was no longer being supported long term. BizNet Software became a compelling business proposition for AIFS because of its price point and its native integration with Excel. “BizInsight is within Excel and everyone here knows Excel,” says Mahoney. BizInsight has allowed AIFS to quickly generate many different reports leaving more time for analysis. “We do our global consolidation and analytical reports using BizInsight. BizInsight even helped us with our audit; we were able to produce better accounting schedules for our auditors,” said Mahoney. “BizInsight is more than just a reporting replacement for FRx, it is an analytical tool for us.”

“BizInsight gives us quicker and better access to our financial information.”

- **James Mahoney**, Vice President of Finance, AIFS

RESULTS

- Support of complex high volume reporting
- Significantly reduced report creation and generation times
- Fully operational after just a few hours
- Cost efficient solution that was intuitive to existing Excel users
