

# Libryo delivers multi-location legal compliance software for Energy Producer to know their law.

The power producer needed a solution to track and manage its regulatory and compliance status to maintain its ISO 45001 and ISO 14001 (2019) across multiple jurisdictions.

## Challenge

The leading independent power producer has an established global presence, currently working across 11 countries internationally. With a global portfolio to oversee, and previously managing legislation in Excel databases, the business was struggling to track the various laws applicable to each of its operations and was seeking a simple system to unify and streamline this process.

In order to maintain its ISO 45001 & ISO 14001 (2019), the renewable energy producer also needed to implement a scalable solution that enabled accurate, up-to-date tracking of its applicable regulations across 3 countries, as well as a clear overview and easy management of its compliance status.

Industry: Renewable Energy

5,000+ Employees

4 Continents, 11 Countries

10 Libryo Streams

3,231 Sections of law

403 Laws

4 Domains: Environment,  
Occupational Health &  
Safety, Quality, Energy

## Solution

Working closely with the customer, Libryo implemented its regulatory tracking and compliance tool across their operations in Egypt, Argentina and South Africa, with further plans to expand the solution across other business operations in the near future. This has enabled the business to maintain its ISO 45001 & ISO 14001 certification.

The solution not only streamlined the whole process from knowing their law, to knowing their compliance status, it also enabled users to drill down to specific legislation relevant to individual sites saving their employees copious amounts of time which would have normally been spent researching for legal updates.

This energy producer was also the first Libryo customer to start using the self-assessment tool where users can review specific assessment items per domain of law and update their compliance status; adding evidence and notes along the way.

## Results

HSSEQ Advisor at the independent power producer, said:

"Knowing our site-specific regulations are up-to-date and ensuring we are compliant helps us to maintain our certification levels. Now with Libryo, we can demonstrate our compliance as well as drill down to check the legal requirements for each location in seconds, rather than days and hours.

We have multiple sites and were trying to log all of this through Excel, with no allocated resources to manage it. Using Libryo, we now have a single, intuitive solution that is user-friendly and highlights any legal updates required."

## Now they know:

- their law and when it changes
- their compliance & consequences
- how to cross compare their law
