

5 tips to create a strong password

Letters, numbers and some nonsense!

1

15+ Characters

Always use a minimum of 15 characters and a combination of letters, numbers and symbols. Using a password manager will also help you manage the complex passwords.

2

Stay away from your pets name

Using your pets name "Coco" followed by your year of birth is not a great combo. Real words in general shouldn't be used and instead made up words are needed (see below).

3

Nonsense that makes sense to you

"I want to go to Venice to eat ice cream" could mean a great deal to you so abbreviating and changing it to this "!W2g2V3n!323!c" makes your password much stronger!

4

Don't use the same password

Even if it's a strong password, using the same password across multiple accounts is a rookie mistake. If a hacker can access one account, they can then access them all.

5

Enable 2FA (and MFA)

Two factor authentication (2FA) is a much needed layer of protection for all of your logins. Ensure you enable 2FA on all of your accounts to help stop fraudsters.

We always recommend a multi-layered approach, which is why a combination of cyber security and disaster recovery solutions as well as educating your team is important.
