Credo’s Mind Map is Fully Embeddable!

Step 1: Create a Map in Credo

Step 2: Copy the Embed Code

Step 3: Paste the embed code into an LMS or LibGuide and edit for size. Use the key below to help you make appropriate edits.

<iframe src="https://search.credoreference.com/search/visual.embed?

1. The “concept” parameter identifies the specific map topic you are embedding. Each Mind Map is assigned a unique number.

2. The “width” parameter here indicates the pixel width of the map itself. Change this number to make a smaller or larger map.

3. The “institution ID” parameter identifies your library. Do not change this number or you will not see any usage of your embeds.

4. The “height” and “width” parameters listed here indicate the size of the Mind Map display box. Always edit these numbers to be larger than the map width (2).

5. The “scrolling” parameter indicates whether or not you’d like a scroll bar on your map. For very large maps, it might be a good idea to change that to “Yes”.
