

Dynamics GP Cloud

Is it right for my company?

Your small manufacturing business has provided clients with customized products. BUT the **frequency of changes** you make on the factory floor to accommodate your customers is **creating many bottlenecks**, from errors in specifications to delays in billing.

Some business associates tout the use of an **ERP software**, like Microsoft **Dynamics GP 2016** to manage the transactional and financial side of the operation.

In addition, many use an on-premise only deployment of Dynamics GP to keep control of their proprietary data while providing what they believe is a more *secure* environment. Furthermore, your IT staff can handle the upgrade through your company server.

78%

of American small businesses will have fully adopted Cloud computing by 2020

40x

Cloud computing is up to 40x more cost-effective for SMB's compared to running its own IT system or department

70%

of SMBs report that they've been able to reinvest funds back into their business after moving to the cloud

94%

of SMBs have experienced security benefits in the Cloud that they didn't have with their On-Premise services

62%

of Microsoft ERP users said their levels of privacy protection increased as a result of moving to the cloud

Unfortunately:

- your server capacity is almost '**maxed out**'
- your IT staff is not keeping abreast of **much needed software upgrades** and patches

So look at **moving up** to Dynamics GP on the **Microsoft Azure cloud**; you don't have to worry about those IT issues.

The Dynamics GP Cloud will provide you with:

- guaranteed **99.9%** uptime
- disaster **recovery**
- **backups**
- seamless **upgrades**

This process can be confusing for traditional companies running on an On-Premise system.

Considering **upgrading** your ERP software and **moving** to the Cloud - talk to the **experts** at TMC. We can help you navigate the differences between the Dynamics GP Cloud and traditional On-Premise deployments.
