LeanIX releases new iPhone app at Gartner Enterprise Architecture Summit in London

Every employee can now carry the company's entire IT architecture in their pocket

BONN, Germany, 12 June 2016. LeanIX announces today, that their new iPhone app is ready to use. The app provides access to the entire LeanIX inventory for Enterprise Architecture.

LeanIX has always maximized usability and developed solutions based on what users know from their everyday life. Many mobile use cases in all aspects of life have been established and the user base of smartphones is still growing by more than 20% per year according to KPCB. From now on, LeanIX is also available via smartphone with a dedicated mobile app. Thereby the new LeanIX iPhone app provides access to information about the entire IT landscape.

Thanks to the fast search in the mobile IT inventory users get access to 360-degree information for every Fact Sheet, e.g. about an application. This not only increases efficiency but also improves decision making, because decisions can be based on facts, anytime and at any place. Additionally, users can interact with application, technology or project experts more easily with intelligent comments, mentions and notifications. This reduces cumbersome lookup of proper contacts and shortcuts lengthy email communication.

"The app is the logical next step of our user-centric approach for Enterprise Architecture." says Co-CEO and founder of LeanIX, André Christ. "Architects can improve the adoption of the EA platform further in their organization. Thanks to the new channel, more employees can be reached with information, which increases the overall value of EA."

The native iOS app will be shown live for the first time at the Gartner Enterprise Architecture Summit in London on 15 and 16 June. The app can be downloaded in the Apple App Store for free starting in July. Prior to general availability, LeanIX will be offering some preview webinars to demonstrate the app.

#####

About LeanIX
LeanIX offers an innovative software-as-a-service solution for Enterprise Architecture Management (EAM), based either in a public cloud or the client's data center. The web-based platform has compelling advantages over traditional approaches, including an intuitive interface, flexible reporting and open APIs. This makes it possible to rapidly roll out LeanIX in an enterprise with minimal training required so as to start reaping added value within a short period of time. Both SMEs and large corporations from an array of industries are utilizing the solution – companies like Axel Springer, Helvetia, RWE, Merck, Zalando and Haworth. Businesses of all sizes are being acquired as customers, firms which used to be reluctant regarding EAM or had had frustrating experiences with cumbersome tools. LeanIX GmbH was formed in 2012 by Jörg G. Beyer and André Christ. With headquarters in Bonn and a subsidiary in the US, the company's large partner network extends throughout Europe and to Australia and the US.
