# SoFi Sustainability Reporting & Management Suite

*"We selected thinkstep and their software based on its appeal as a total solution. The strong technical features enable fast data collection and reporting as well as benchmarking of our international sites. The intuitive user interface combined with the expertise of thinkstep professionals is an ideal combination."*

Lea Maria Kemper  
Environmental Sustainability Manager, Beiersdorf

## Disclosing high-quality sustainability information takes time and resources

Disclosing sustainability information involves a lot of time collecting and analysing data from many different sources. At the same time, there are a multitude of new disclosure standards to track and respond to. Many businesses also lack transparency of their sustainability targets and actions required to improve performance. All of this makes for a cumbersome and resource-intensive process.

## Sustainability Reporting & Management Suite

The thinkstep Sustainability Reporting and Management Suite enables fast sustainability reporting and advanced performance management. Automated data collection, powerful reporting tools and advanced planning features make disclosure and performance management efficient, precise and simple.

### **Reduce the time spent on data collection and reporting by more than 50%**

We enable you to cut time spent on collecting, validating and reporting data. Our pre-built workflows cover all common disclosure standards and ratings like CDP, GRI, DJSI.

### **Improve resource efficiency**

Manage and improve sustainability performance and resource efficiency by setting targets, analysing results and carrying out benchmarking.

### **Faster certification and compliance**

Speed up voluntary and regulatory compliance reporting with instant data quality checks and transparent audit trails.

### **Protect your reputation and brand value**

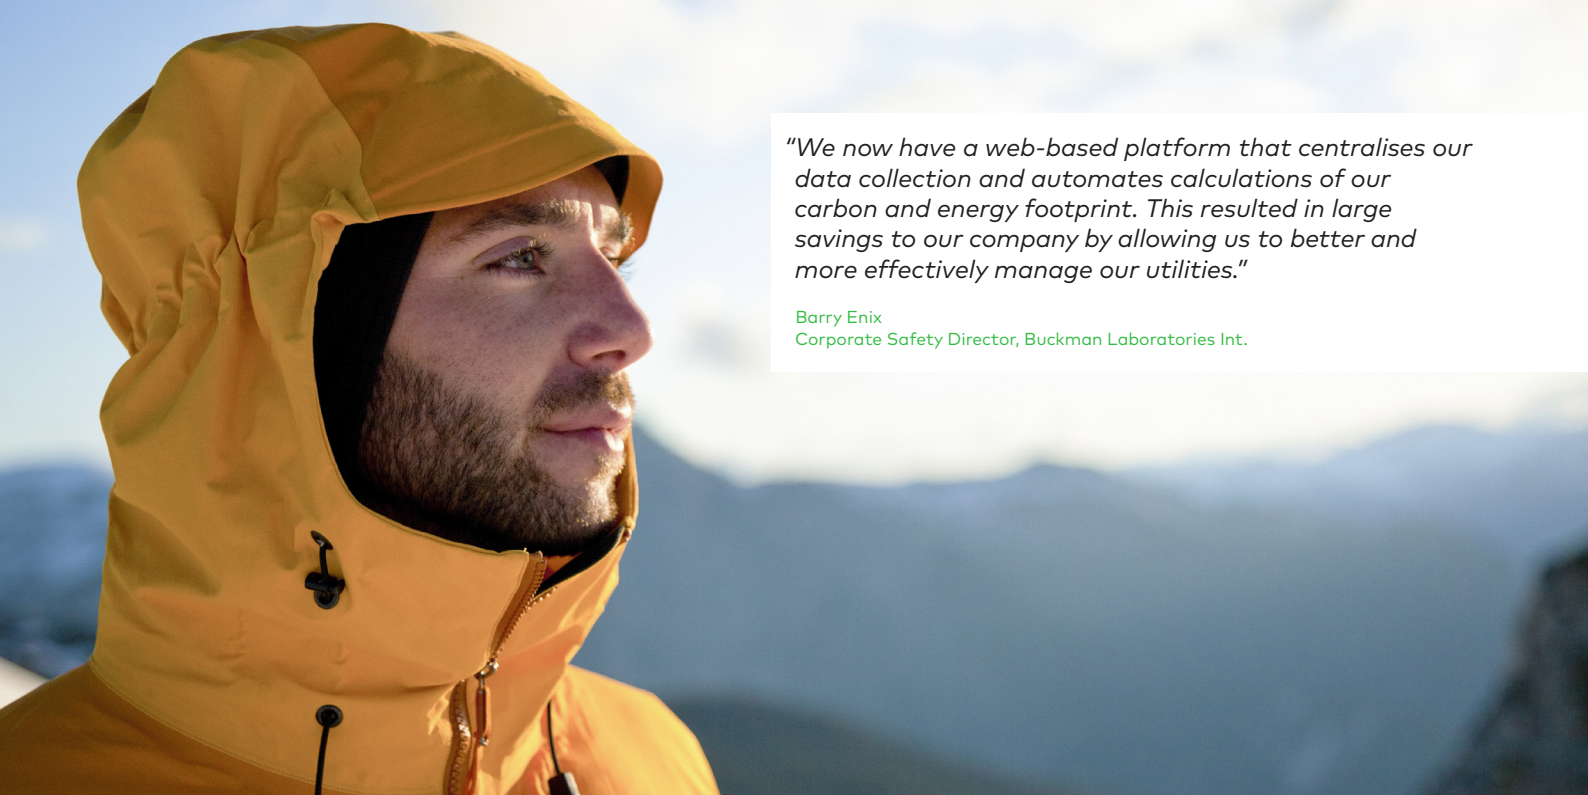

Make a strong commitment to sustainability and strengthen your brand against competition. Share powerful sustainability information more frequently to stakeholders.

### **Improve risk management**

Be prepared to meet future mandatory requirements and identify risks today. Identify underperforming sites with our benchmarking, audit and compliance tools.

*"We now have a web-based platform that centralises our data collection and automates calculations of our carbon and energy footprint. This resulted in large savings to our company by allowing us to better and more effectively manage our utilities."*

Barry Enix  
Corporate Safety Director, Buckman Laboratories Int.

## Applications for Sustainability Management

### Materiality Analyser

Survey stakeholders and build a materiality matrix to prioritise sustainability aspects.

### CDP Reporter

Collect, validate and submit performance information to CDP using the most recent questionnaires.

### GRI Reporter

Build a sustainability report according to the GRI framework from data collection to KPI calculation.

### SASB Reporter

Use the SASB industry sector sustainability accounting standards for your report.

### Performance Manager

Manage KPI analysis, perform benchmarking, plan, forecast and analyse sustainability ROI.

## Consulting Services

### thinkstepGO™

Sector-specific screening of key issues and approaches to identify opportunities for streamlining your reporting activities.

### Materiality Assessment

Managing your assessment from issue identification through to reporting and strategic planning.

### Environmental Footprinting

Calculation of corporate carbon, water, or land-use footprints to enhance reporting and management efforts.

### Corporate Reporting

Report development services to maximise the exposure and benefits of your reporting activity.

### Business Value of Sustainability™

Identification of where sustainability adds value & how to calculate sustainability ROI.

## Data Foundation

With our database and reporting capabilities, you always have the most up-to-date emissions factors and pre-filled reporting schemes covering the CDP questionnaire and GRI framework for rapid reporting. Our Benchmark and Best Practice Libraries allow you to compare and improve your sustainability performance by reviewing best-in-class and best-practice projects. Data exchange technologies enable efficient data capture and integration with existing IT-systems such as SAP or other enterprise software.
