

## Improving Sustainability through Digital Transformation

Climate change, the SDGs and the plastic agenda change how companies develop business. Today, sustainability professionals face the challenge of having to give fast and reliable information to all other business departments, while also setting direction and focus.

New investor requirements, increased focus on implementation of circular strategies and responsible business operations are all aspects to consider when endeavoring to do good business with sustainability data. The digital transformation of sustainability data across the company is crucial in order to embed sustainability in products and corporate strategy. But, how can the different business units integrate sustainability in their choices?

To address this and other challenges, we invite you to a two-day educational event focusing on trainings and future trends.

You are the market leaders with regards to sustainability work. Collaboration will enable change and the succession of sustainability. We are looking forward to two days of interesting exchange, discussion and learning!
