Mi Expenses

Mobile Cloud
Expense Processing

Technology has the ability to transform the way we manage the capture and processing of business expenses. Being able to reduce the time consuming back office task of painstakingly checking spreadsheets and receipts, and improving the ease of input for the employee.

Mi Expenses provides a more efficient solution enabling claimants to initiate, build and fully submit expense claims from a smartphone or tablet. Lost receipts, inaccurate or missed expenses will be reduced along with driving adherence to company policies and, dare we say it, help reduce fraud.

The mobile app draws from our experience to create a solution that can be tailored to your organisations unique requirements, along with implementation and full integration to Oracle ERP applications, which means you can be assured that this key business process will run smoothly.

ARCivate

Manage your Expenses on the move

- Capture all receipts instantly
- Monitor spend as and when it occurs
- Complete mobile submission
- Offline Processing
- Workflow approval
- Visibility via reporting

By capturing expenses at the point where they originate and then delivering it to an enterprise application for processing.

Organisations can accelerate their expense claim process, speed up transactions and reduce operating costs.

## The Key Features and Benefits of Mi Expenses

Making Expense processing is easy to submit, with seamless integration significantly reduces the cost and increase the efficiency to organisations; the ability to ensure receipts are not lost and data is entered correctly reduces overheads. A modern cloud based solution with full mobile capability to solve this problem will lower costs whilst providing the governance and compliance structure which will add value to the business.

Key to Finance

- Reduce Admin and processing costs
- Eliminate paper processing and storage
- Improve efficiency
- Improve control of VAT recovery
- End to End Visibility and control
- Compliance with policy and auditing

Employee benefits

- Mobile on the move capture and submission of expenses
- Simplified process for expenses
- Tracking of the reimbursement process
- 24/7 Secure online submission
- Increased employee satisfaction

Platform

Mi Expenses utilises Oracle cloud technology to enhance the expense claim process by enabling business users to submit these through the use of a mobile device; or an iPad or Android Tablet. Users are able to securely access the device and use the inbuilt camera to capture all receipts and attach them to their expenses claim, along with the relevant data to then complete the submission.

Capture

Using the inbuilt camera within the mobile device and accessed by the application, all receipts can be captured, stored and added to an expense line. By submitting expenses from the mobile application all receipts and mileage claims are recorded, logged and the relevant tax and expenses type correctly selected and stored.

Approval Process

Following the capture of receipts and the submission of the expense claim they are stored within Oracle's Document Cloud Service and provides the subsequent access information and stores the required metadata. This initiates the workflow approval process that notifies managers and fully integrates the information into Oracle EBS iExpense, Fusion Expenses module and JDE.

Integration to Oracle Financials

Built on Oracle's Integration Cloud Service, the solution is based on enterprise services with secure and seamless integration with Oracles Financials applications and systems in your datacentre. Connect additional cloud and/or onpremise applications where data is required to be fully utilised for organisational business benefits, productivity and return on investment.

Security

Our solution has a unified approach that offers enterprise-ready security patterns to secure your apps end-to-end. Rich mobile analytics helps you understand if your mobile strategy is successful whilst providing a secure and centralised location to manage your reusable assets.
