

Make Every Classroom a Safe Classroom

For Free

What is Safe Classroom?

Safe Classroom is an emergency alerting and safety communication platform that allows you to warn your stakeholders of an emergency and communicate throughout the process. When a serious incident or event happens, Safe Classroom gives you the power to instantly send an audible alert to every classroom computer/mobile device. These alerts can come from the district or school level, and you can set different audible tones to match specific types of emergencies.

Through Safe Classroom, every classroom is connected through communication:

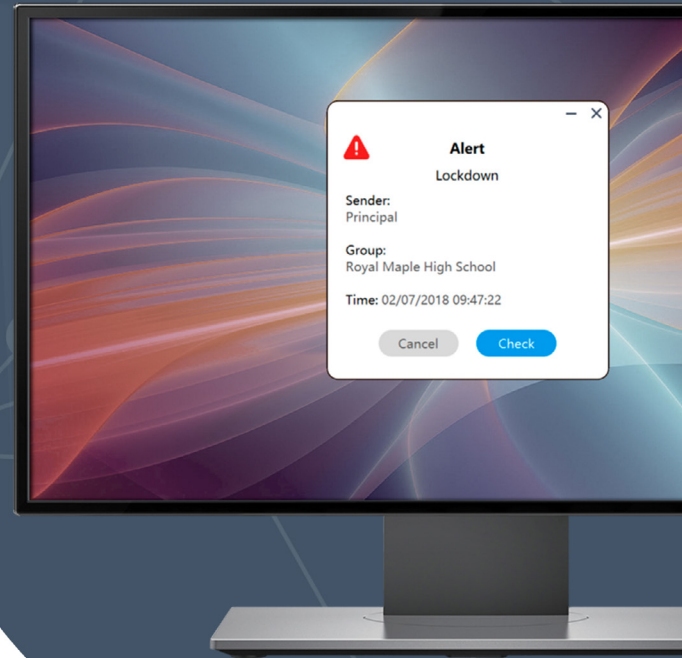

- Staff can send and receive safety information.
- Multi-media messaging allows you to communicate more clearly
- Everyone is kept informed throughout an emergency.

Quick and Easy Deployment

You can deploy Safe Classroom to every computer in your District in a matter of minutes. CrisisGo has an online project portal to walk you through the steps of your Safe Classroom rollout. Our self-subscribe feature makes it easy to get all your staff on board, and we offer in-app training to ensure your staff can master their new safety resource.

Safety Around the Clock

Just like anti-virus software, Safe Classroom is always running when your computer is on. Your staff won't have to worry about logging in every day. Once you have initially logged in, the app will continue to run in the background.

Mobile Access

Safe Classroom can easily be put on your district computers, but you can also have mobile access to Safe Classroom by downloading the CrisisGo app to your mobile device. If your administrators and teachers want greater access to their safety resources, they can seamlessly use our mobile and computer app to ensure they're connected no matter what screen they're looking at.

Automated Escalation

Included in Safe Classroom is CrisisGo's Automated Escalation feature, which allows schools to instantly inform Law Enforcement, Fire, and/or Medic responders of a serious threat that cannot be completely handled at the district level. An Alert is sent directly to responders, and appropriate First Responder Teams are automatically connected to the people who are under threat via CrisisGo's emergency communication platform.

Safety Awareness

Safe Classroom users will also have access to Crisis Go's Safety Awareness system, which allows you to send safety content that covers a wide range of safety risks and solutions to all your stakeholders. Being able to educate your staff about safety in a way that goes beyond surface level common sense information could make the difference between teachers who react with confidence or teachers who panic and shut down.

"Every superintendent has the opportunity to make a proactive school safety difference, and I know of no better partner than CrisisGo."

Dr. Joseph Erardi, Jr.
AASA Executive Board Member
