

## Safety Drill Management

### Drill Smarter With a Stronger Platform

Safety Drills help everyone to be safer by practicing the skills required for an emergency situation. It is important to keep accurate records and ensure that all buildings are meeting the state requirements, which is why CrisisGo improves the accuracy of drill reporting while reducing the time and effort of documentation.

With numerous safety drills that need to be completed in multiple buildings at different times, it can be difficult to keep track of when to schedule drills and what drills have been completed. CrisisGo's Drill Management feature allows you to automate drill scheduling, drill monitoring, and drill reporting all from your CrisisGo dashboard. CrisisGo helps organizations focus on drill skills, not the post-event paperwork.

### CrisisGo Drill Management Provides:

- Easy setup of the yearly safety drills with customizable drill schedules and drill frequencies at the district and school building level.
- Easy drill reporting for managers using the CrisisGo app and console.
- Automated early reminder emails to managers if drills are not yet completed.
- Automated email delivery of pre-drill and post-drill reports to designees.
- A comprehensive view of your safety drill statuses: How many drills have been scheduled, what drills have been complete, and which buildings are in compliance.

### How Drills Work with CrisisGo

Starting with the CrisisGo Drill Alert, the staff and building safety team will start to respond to the situation. During the drill, the building staff will use CrisisGo to communicate and access the safety plan content as if they were in a real situation.

The idea is to practice like you would play. At the end, the Drill Alert is released, the drill report is finalized, and email reports are sent to safety managers and appropriate responders.
