

Why CrisisGo?

What We Believe

We believe safety is a shared responsibility and anyone can become a first responder during a crisis. Technology like ours allows organizations to be better prepared to respond to emergencies—anywhere, anytime.

What We Do

The CrisisGo digital safety and incident management platform can reduce response times, saving valuable time in an emergency. It ensures emergency alerts, messages, and notifications are coordinated across devices to first responders, safety and security teams, organization stakeholders, and their communities during a crisis.

CrisisGo is highly secure, as demonstrated by its approved inclusion in the App Catalog for FirstNet, and our reliability is demonstrated as an AWS Advanced Technology Partner. The Open API enables easy integration with IoT devices and virtually all communication systems and channels, creating robust, comprehensive safety networks for virtually any organization.

How We're Different

CrisisGo is the only incident management platform that coordinates alerts, messages and notifications through communication and IoT devices across and within first responders, school safety and security teams, teachers and staff and the entire education community.

With CrisisGo, You Can:

- Reduce response times
- Save time in an emergency
- Improve role-based notifications
- Increase situational awareness

Get started with CrisisGo today.
