Elecnor is a leading global corporation dedicated to project development, construction and operations for two large business segments: **Infrastructure** and **Concessions**.

With nearly **60 years of continuous growth**, a presence in more than 50 countries and more than 15,000 employees, Elecnor has become one of the biggest Spanish and European business groups and a point of reference for **infrastructure, renewable energy** and **new technologies**.

THE CHALLENGE

Elecnor's construction projects require both **remote** and **on-premises** work, with coordination between different teams and complex information management. This work is often on the go, but requiring access to high performance computing to manage projects. To meet the demands of our business, we needed a solution that would give our workers **the ability to work on projects from anywhere with access to the right level of high computing power, but without raising infrastructure costs**.

We met with **SimpleCloud** to understand in depth their solution for AECM. After receiving a **SimpleCloud** demo, we **easily** created an account and started the proof of concept that **exceeded all expectations**. In a **few minutes**, we deployed desktops connecting to powerful virtual machines in a **secure environment**, with **high graphical specs** beyond our needs, and which were accessible from any device. In comparison, competitive offerings often took days or weeks to implement and was way less flexible.

The platform is very **intuitive** with an easy to use interface, which offers great advantages to both our employees and our IT crew. Of vital importance, we can keep all the information of our projects **controlled** and **centralized**, with all the resources accessible, expediting business operations and **it's also perfect for BIM usage**.

THE RESULT

“SimpleCloud AECM platform allows us to create our projects on demand, in a flexible way and without investment in new infrastructure”.

*“SimpleCloud AECM platform allows us to create our projects on demand, in a **flexible** way and without additional investment in new infrastructure. This gives us a great advantage: **adaptability** and **efficiency**, using adequate resources at the right time and for just as long as we need it.*

Our users can connect to very powerful virtual desktops (powered by IBMCloud) from anywhere and through any device, allowing the usage of proprietary tools and cutting-edge specific software for the most demanding construction tasks”.
