

Security Messaging

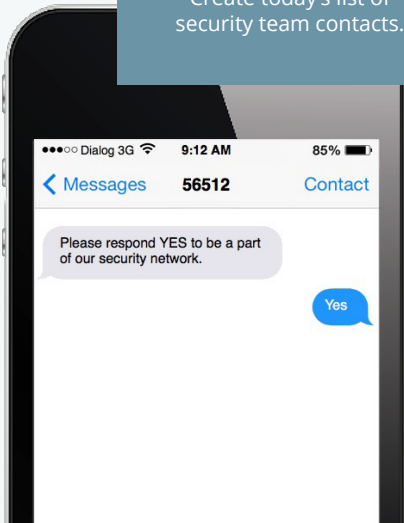

PROBLEM: It's difficult to get all teams notified immediately and efficiently when an issue or danger arises on site.

OUR SOLUTION: To send a group SMS or MMS message to security teams, reporting a suspicious person, lost child, or emergency updates or alerts.

HOW IT WORKS

STEP 1

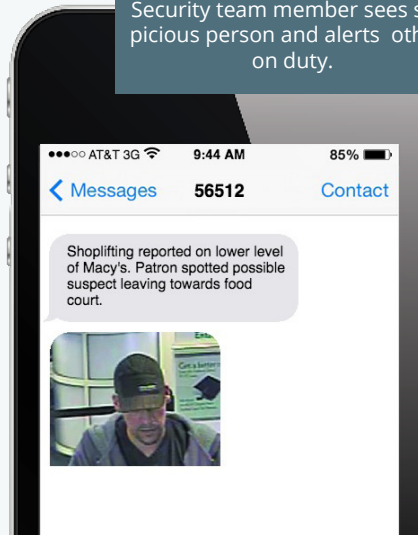

Create today's list of security team contacts.

Organization sends group text to team members confirming participation.

STEP 2

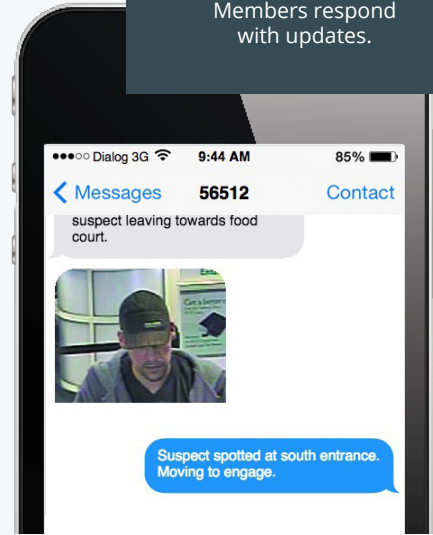

Security team member sees suspicious person and alerts others on duty.

Security member sends text with photo to other members of security team.

STEP 3

Members respond with updates.

Group is able to stay up-to-date on status and report when suspect has been apprehended.
