

CASE STUDY

Ecole Privée *Sainte-Anne*

ORGANIZATION:

Saint-Anne private school,
<http://www.sainte-anne.lu/>

Before the DeskAlerts, Saint-Anne didn't have any communications solution in their school.

They were looking for a way to quickly deliver important notifications to classes during the lectures.

INDUSTRY:

Education

CHALLENGE:

Delivering the different priority messages, emergency or pre-recorded to the classrooms.

SOLUTION:

DeskAlerts were chosen as a tool that works across different operating systems and delivers messages with the rich content, such as voice, videos, presentations and images.

BENEFITS:

School director is now able to send different multimedia notifications to classrooms where they are displayed to students with beamer and speakers.

Saint-Anne, private school located in Luxembourg, was looking for a solution to deliver a notifications from school director to the classrooms.

The solution should have been working for Windows and Mac operating systems and supporting fullscreen displaying of multimedia content.

"We were looking for a software solution, that could fulfill the requirements of a school announcement system. After trying a few solutions, we opted for DeskAlerts"

***Victor Gonçalves,
IT Department***

Saint-Anne highlighted some features of DeskAlerts as most valuable for their case:

- Ability to send multimedia content
- Ability to send fullscreen notifications
- Ability to pre-record messages

"DeskAlerts allows the school director to transmit pre-recorded messages (text, audio, video) to the teacher's computer in our classrooms. With an alert appearing on screen, the teacher powers on beamer and speakers and plays the message to the students in his classroom"

***Victor Gonçalves,
IT Department***
