

# User driven deployment with Autopilot

## The opportunity

The time, effort and cost for organizations in managing the process of building, pre-configuring, deploying and re-deploying devices is in many cases high and error prone.

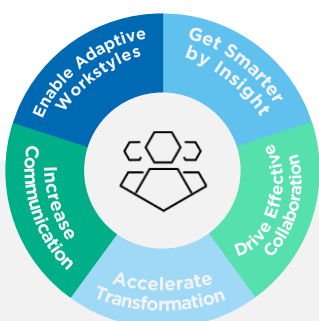

And together with the fact that the process tend to requires a lot of user interactions it introduces unnecessary lead-time and prevents a seamless, user-driven and connected experience for the user within the organization.

Overcoming this challenge is especially important when trying to attract and retain a younger and more digitally savvy generation of talents.

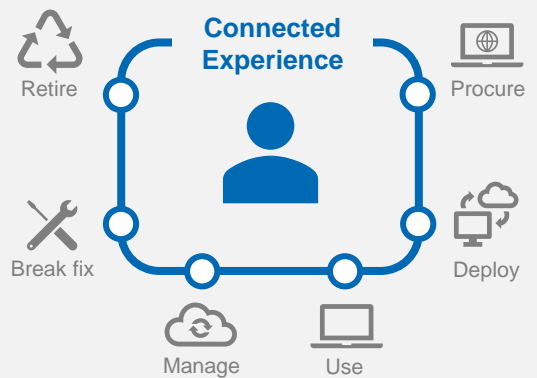

## The solution

Introducing Autopilot and Microsoft Endpoint Manager will put the user in the driver seat when it comes to their primary tool at work as they can seamlessly install their Windows device and applications over only an Internet connection.

Windows Autopilot can join devices to Azure Active Directory and enroll them into the mobile device management solution to ensure they are fully configured, compliant, and secure before any users can access the desktop and start being productive.

## Device Lifecycle

## The value

Windows Autopilot will simplify all parts of the lifecycle of Windows devices, from the initial deployment through the end of life of the device.

This solution will coexist with the organizations current environment and can target all kind of user profiles such as travelling users, users without a corporate office or locked-down single purpose kiosks devices.

By leveraging the cloud powered Autopilot solution the overall costs for deploying, managing and in the end retiring Windows devices can be reduced by minimizing the amount of time the organization needs to spend on this processes and the required infrastructure for it.

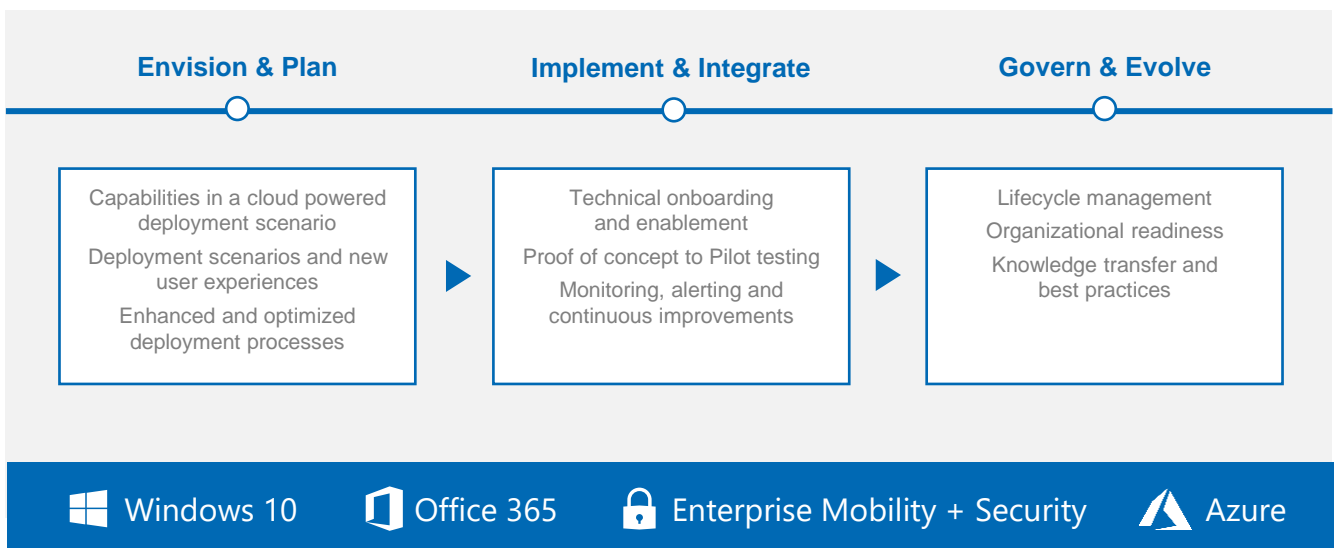

# User driven deployment with Autopilot

## The how

With decades of experience and deep technical expertise in bringing modern workplace experiences to customers in all industries we will bring unique insights in a prescriptive way to rapidly bring the organization a solution for piloting Autopilot built on top of Microsoft Intune.

The engagement will also include experiences and firm advice in enhancing the overall deployment process

By bringing the do's and don'ts to the table we will guide and lead the organization through the journey of modernizing and transforming their way of managing devices and the connected experience of their users.

## Why Enfo

Our values are at the core of our actions; collaboration, trust, continuous development and expertise.

We walk beside our customers in their data-driven business transformation, taking ownership of their transformation as if it were our own.
