

Vulnerability Management as a Service

Identify Vulnerabilities and Reduce Risk

Vulnerabilities emerge every day within networks, web applications and databases. They may occur due to software defects or misconfigurations of information systems. It is essential to protect your critical IT assets and safeguard sensitive information by eliminating these opportunities for potential cyber adversaries.

Customer Benefits

- Proactive in your security approach
- Identify real, exploitable vulnerabilities
- Satisfy regulatory compliance requirements
- Supplement your team with dedicated vulnerability management experts
- Track remediation workflow easily
- Access information security experts

Solution Features

- Highly accurate internal and external vulnerability scanning
- Supports physical, cloud and virtual infrastructure
- Dedicated vulnerability management team provides expert guidance and support
- Flexible reporting and remediation workflow tools via on-demand portal
- Policy and compliance scanning to satisfy regulatory mandates
- Expert support by certified security analysts

Identify Security Threats and Reduce Risk

According to research conducted by Gartner, through 2020, 99 percent of vulnerabilities exploited by threat actors will continue to be ones known by security and IT professionals for at least one year.

One common thread in the dialogue of regulatory challenges and litigation has been, "Did the organization have a plan to address known vulnerabilities and did they execute on that plan?"

Additionally, IT organizations are commonly expected to explain how threat actors penetrated existing defenses in the event of a security breach.

Comprehensive vulnerability management, a foundational component of an organization's security posture, can be difficult to manage due to time and resource constraints.

To lower business risk, meet compliance mandates and protect critical assets, organizations need complete visibility of the vulnerabilities that exist in their IT environment, context to determine their relative risk and a remediation plan.

Enfo

Data-driven business transformation

Enfo is a Nordic IT service company enabling its customers' data-driven business transformation. With our niche expertise in hybrid platforms, information management and applications, we bring together relevant data for more intelligent operations. We both build and run digital solutions – supporting our customers with genuine care in mastering the complexity. We are 900 experts working for a more intelligent world, with technology empowering people, businesses and societies.

How Enfo Cybersecurity Helps

Enfo Vulnerability Management as a Service (VMaaS) partners with leading security platform providers to perform highly accurate scan audits across internal and external network devices, servers, web applications, databases, and other assets on-premises and in cloud environments.

Provided as a flexible scheduled service, Enfo VMaaS provides world-class vulnerability management without the hardware, software and maintenance requirements of most scanning products. The security platform technology is fully managed and maintained by our dedicated vulnerability management team, eliminating administration and maintenance burdens.

Taking It to a New Level

Enfo VMaaS can be delivered as a Platinum tier that is a fully managed solution designed for large enterprise Customers, which implements and manages powerful vulnerability scanning capabilities as well as the prioritization and tracking of remediation activities. VMaaS Platinum solves two problems: how to prioritize vulnerabilities identified by the scanner, and how to ensure timely remediation of the biggest threats.

Our Vulnerability Management solution reduces your exposure, ensures regulatory compliance, and safeguards your devices and data, allowing you to focus on your business priorities. There is no operational overhead with our solution, eliminating the demand on Customer personnel to chase false positives, false negatives and host crashes.

New signatures are delivered weekly, meaning the solution stays up to date on the ever-evolving global threat landscape.

Powerful, Effective Scanning

Our Vulnerability Scanning service delivers the largest and most up-to-date knowledge base of vulnerability checks, using internal and external scanners to accurately detect vulnerabilities across your network and supported cloud environments.

Security platform modules provide the added value of:

- **Cloud agent:** Extends security across a Customer's enterprise by collecting vulnerability data on each host even if the host is not connected to the network. Provides faster and more accurate scan results.
- **Threat protection:** Cloud-based solution that prioritizes vulnerabilities posing the greatest risk by correlating active threats against vulnerabilities. Also includes a Live Threat Intelligence feed and dynamic dashboards to highlight areas of exposure.
- **Continuous monitoring:** Constantly monitors a Customer's perimeter, detecting changes in the network and providing alerts before they turn into breaches.
- **PCI compliance:** Provides scanning of in-scope IP addresses, review of submitted false positive exceptions and reporting.
- **Policy compliance:** Automates the process of assessing server and application configuration compliance, which is useful for Customer's subject to compliance mandates (PCI DSS, HIPAA and ISO27001).
- **Web application scanning:** Automated, self-service vulnerability scanning of internal- and external-web-based applications.
