

# Accelerate collaboration with Microsoft Teams

## The challenge and opportunity

The workplace as we know is no longer just a physical space where employees gather during regular office hours, and our always connected environment blurs the line between the physical office and the place where work really gets done.

The nature of teamwork has also changed in the last decade, requiring organizations to give people modern and mobile collaboration tools that meet the needs of dynamic ways of working.

It's never been more important for organizations to swiftly be able to collaborate and share the most up-to-date information to make strategic decisions that impact their organizations and their customers

## The solution

Organizations should provide its people a modern hub for teamwork that supports multiple ways of interacting, communicating and collaborating on data, regardless of location or the device of choice.

The solution should enable people to customize their workspace based on work style and support rich extensibility to processes automation, artificial intelligence, 3<sup>rd</sup> party applications and devices.

There should be enterprise level security built into the solution to enable users to collaborate mobile and efficient but still secure and compliant.

## The value

Using Microsoft Teams will enable the organization to communicate across geographies, languages and with other organizations through guest access, federation and translations.

People can stay connected with a complete meeting solution that support sharing, video and audio conferencing.

The solution enables the organization to provide a seamless calling experience with the use of Teams calling, integration to existing phone systems, calling plans or direct routing.

With Microsoft Teams the organization can access, share, and collaborate on data in a secure way regardless of physical location, all powered by the built-in access to all Office 365 applications.

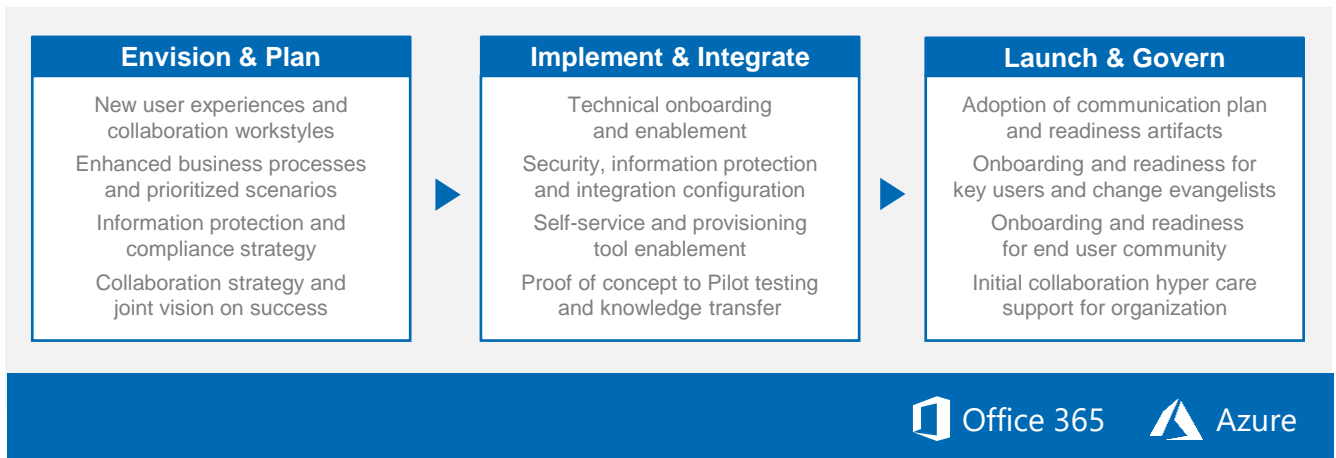

# Accelerate collaboration with Microsoft Teams

## The how

Introducing Microsoft Teams within an organization is not just technical enablement but requires a high degree of business transformation activities to secure a successful implementation and unlock all benefits of the solution. With our long-term experience and expertise in bringing modern workplace experiences to our customers we will bring unique insights and perspectives into a successful introduction of Microsoft Teams.

By our structured approach we will guide and lead the way all from ideation and envisioning of what business value Microsoft Teams would bring to the organization, to requirement gathering and planning emphasizing on defining a solid governance model to secure information protection and security. Technical onboarding is done with the aim to deploy a robust and automated way to manage all collaboration resources, powered by a unique self-service and provisioning tool provided by Enfo.

The goal with our approach is to quickly onboard the organization to the new collaboration capabilities and via our education center enable new ways of working for people to maximize the business benefits of Microsoft Teams.

## Why Enfo

Our values are at the core of our actions; collaboration, trust, continuous development. Our strength is in our expertise where we work together, focusing on customers' needs and respond to change driven by digitalization.

We walk beside our customers in their data-driven business transformation, taking ownership of their transformation as if it were our own.

**Mastering
