

Innovate with Microsoft Power Platform

The challenge and opportunity

Today's IT organizations are under severe pressure from a capacity and cost-perspective when key resources are often over allocated, causing many business initiatives to be delayed, put on-hold or not even started.

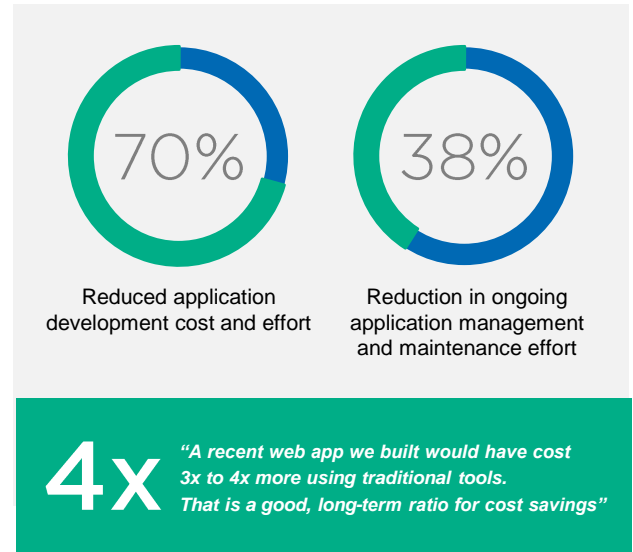

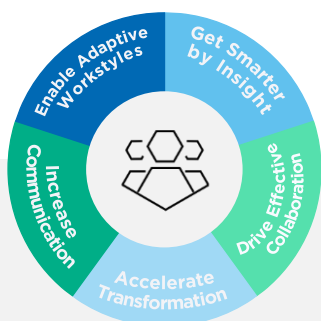

Innovative employees are starting to question this traditional way of working and don't want to wait for the IT organization to hopefully develop digital solutions that could meet their business needs.

The IT organizations have a hard time providing the necessary tools required for employees to start exploring new ideas instantly and without coding skills, and without these capabilities in place many great ideas might not be evaluated and prototyped leading to missed business opportunities.

The solution

The organization should have access to a modern and secure platform for user driven development and prototyping, where the organization quickly can build responsive applications addressing specific organizational need and drive innovation.

User driven but still controlled application development is not just about establishing the technical environment, It's the start of the journey in digitally transforming an organization that will embrace innovation and continuous development..

The value

Providing a modern and secure platform for rapid development will enable the organizations to build responsive applications addressing business needs in a faster way.

Empowering employees to innovate and build applications will create new possibilities for co-creation and collaboration within the organization.

The IT organization can focus on strategic development projects that require experienced system developers and specialists.

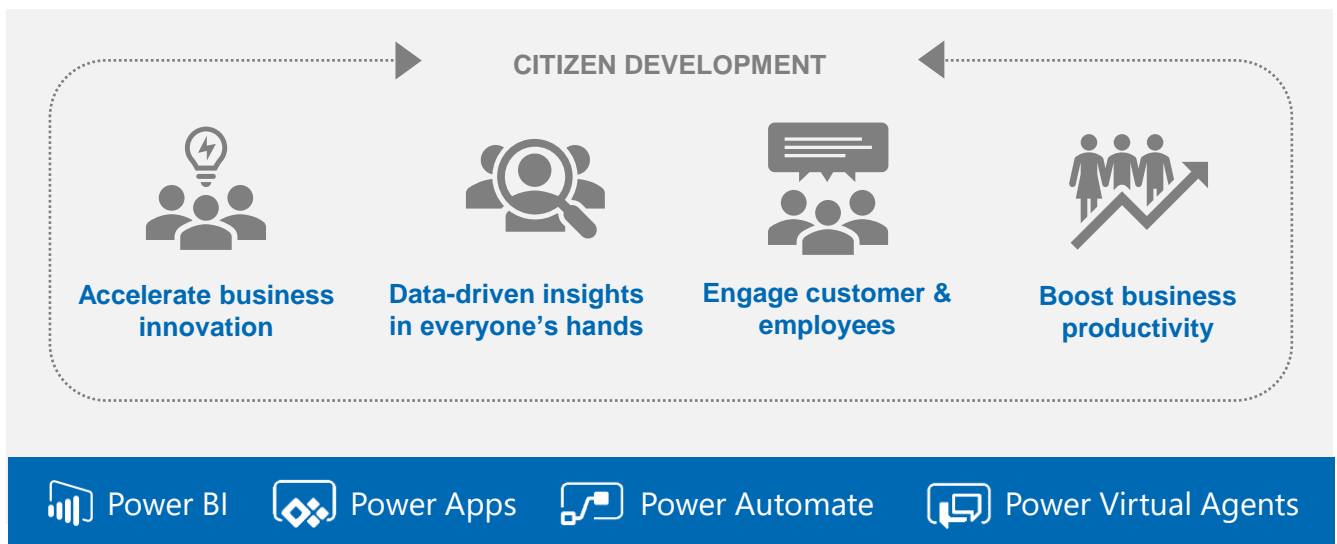

Taking advantage of the opportunities in the Microsoft Power Platform will spark co-creation and innovation across the organization utilizing the collective knowledge to create business value.

Innovate with Microsoft Power Platform

The how

Enfo will guide the organization through the journey to a new and innovative way of working with Microsoft Power Platform with the aim to boost business productivity. This includes everything from technical onboarding and readiness, governance models and ambassador engagement plans to govern organizational adoption.

Our experience will help the organization to identify “low-hanging fruits” to start with regarding automation, data insights and rapid app prototyping, together with a long-term roadmap and baseline for continuously ROI follow-up. In a co-creative manner we will build the most prioritized applications to create a foundation for future success where we can act as the organization's digital innovation incubator and strategic partner.
