

Optimized password-less authentication

The challenge

Securing authentication towards the organizations valuable assets is crucial in the digital age. But as cyber crime increases the use of passwords leaves organizations increasingly more vulnerable as users become more predictable in generating them.

Stronger requirements on password complexity and frequent updates will impact the productivity of the organization and drive significant amount of work for IT help desks to manage password issues.

The use of passwords have since long been recognized as inadequate, but the technology is now offering alternative authentication methods that organizations should adopt to keep their data safe.

The solution

Implementing and configuring modern multi-factor authentication replaces passwords with a secure alternative for the organization that reduces the risk from phishing and password attacks.

This will give people an easy and convenient way to sign in and access data from anywhere, via a PIN that's secured on the device or by using biometric recognition methods such as fingerprint or iris scans, or by facial recognition.

The value

By moving the organization to password-less authentication will enable improved security and a better user experience.

Replacing passwords within the organization would dramatically reduce the time and effort IT support team need to spend on password reset incidents.

The time to signing into applications and services can be improved since no passwords need to be create, store, or remembered.

Implementing password-less authentication will enable the organization to have a it-ecosystem of authentication that meets the need for security and privacy, usability, and interoperability among different authentication devices.

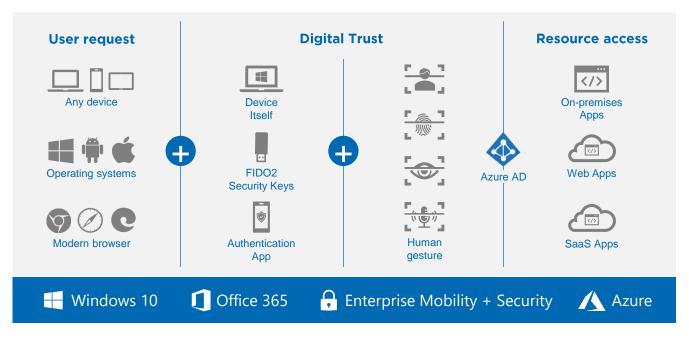

Optimized password-less authentication

The how

With long-term experience and deep technical expertise in bringing advanced and connected experiences to our customers, we will bring unique insights and perspectives into establishing modern and secure multi-factor authentication solutions to the organization.

Our prescriptive advice and experience in how to properly implement and make use of advanced authentication techniques. All with the goal to strengthen the organizations ability to avoid malicious cyberattacks targeting the passwords of their user community.

Why Enfo

Our values are at the core of our actions; collaboration, trust, continuous development. Our strength is in our expertise where we work together, focusing on customers' needs and respond to change driven by digitalization. We walk beside our customers in their data-driven business transformation, taking ownership of their transformation as if it were our own.
