Know your Sensitive Information is Secure.

Security threats exist just below the surface of your everyday online actions.

Scanning for potential risks is paramount to keeping your business' reputation and office security intact.

What IS the Dark Web?

The Dark Web is a vast, unprotected, and unregulated sublayer of the internet, hidden from conventional search engines. Stolen data from your employees or customers could be posted here in hopes of exploiting your business.

350%
Ransomware attacks are growing more than 350 percent annually.

284
From the companies we've scanned, on average, we've found 284 compromises.

50 DAYS
The average cost in time of a malware attack is 50 days.

With Office1's Dark Web Scan, our experts will:

✔ **Compile a database of information on the dark web** and run it against your company's domain.

✔ **Analyze the data from the past 36 months** to catch any possible data leaks.

✔ **Give you a report, within seconds,** for any risks your company may be facing online.

✔ **Create a customized security strategy for your business** to better inspect, identify, and monitor your Dark Web presence to take actions in maintaining safety and success.
