

How well do you know your Quality Measures?

Measure, monitor & manage to optimize outcomes

PointRight delivers a robust Quality Measure (QM) toolkit that enables SNFs to measure, monitor and manage their Quality Measure outcomes, while also providing comprehensive QM reporting to various stakeholders across the long-term, post-acute care continuum. As part of this toolkit, PointRight offers access to the following:

CMS reported Quality Measures without the limitations of CASPER and Nursing Home Compare

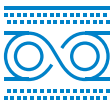

- View data across the enterprise
- Obtain historical data and trend reports
- Perform further analysis with exportable reports
- Realize efficiency with a single access point for all measures

PointRight calculated Quality Measures derived from MDS data based on CMS methodology

- Attain timely insight into current performance
- Access a real-time Resident Roster
- View enterprise-wide and group-level reports for comparisons
- Perform further analysis with exportable reports

Electronic data exchange enabled via Web APIs

Integrate PointRight data into client-specific dashboards, scorecards, or other business intelligence applications.

*PointRight's analytics tools not only tell me how I'm doing today, but **I can operationalize these tools** to affect change tomorrow and better compete in the value-based arena.*

Director of Business Development
& Strategic Planning
AristaCare Health Services

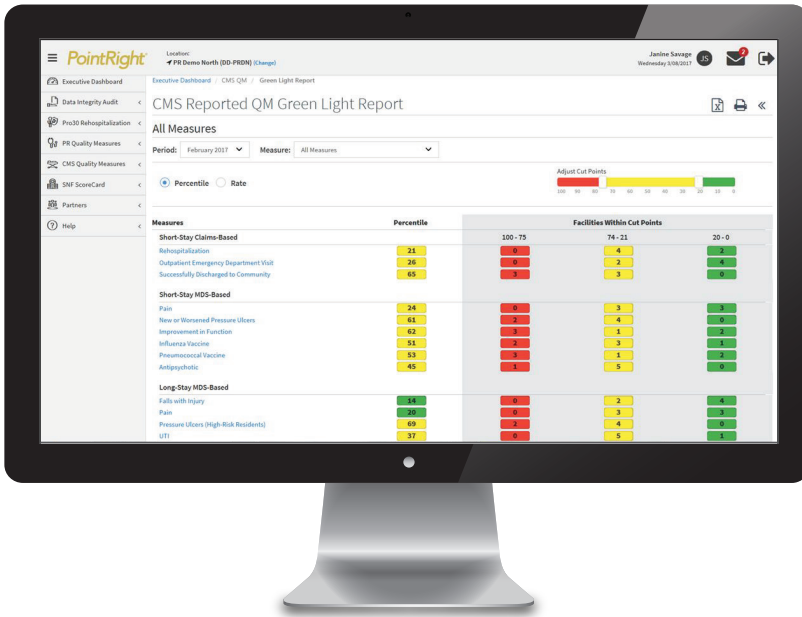

A single source of clinical and operational intelligence across the enterprise

Identify areas of strength and achievement

Address performance gaps and deficiencies

Establish best practices to guide clinical transformation

From insight to application

When to use CMS reported Quality Measures

- ▶ **Performance Evaluation**
Identify best practices with clinical and business intelligence for individual SNFs and groups.
- ▶ **Business Development & Marketing**
Position strengths and achievements to key referral sources and consumers.
- ▶ **Quality Assurance and Performance Improvement (QAPI)**
Analyze patterns and trends to determine PIPs, and conduct root cause analysis.

When to use PointRight calculated Quality Measures

- ▶ **Assessment & Care Planning**
Discover triggered QMs for a particular resident and ensure MDS coding accuracy.
- ▶ **Risk Management**
Guide development of standards of care and monitor adoption across the enterprise.
- ▶ **Quality Assurance and Performance Improvement (QAPI)**
Select residents with target QMs for medical record review; identify areas of concern before they become CMS reported.
