

Reduce Your Business Risk with a Data and Analytics Health Check

Altis works with organisations to provide an independent assessment of their current Data and Analytics solution. Our Data and Analytics Health Check is typically 3-4 weeks in duration, and can often be the first step to restoring confidence in a key strategic information asset.

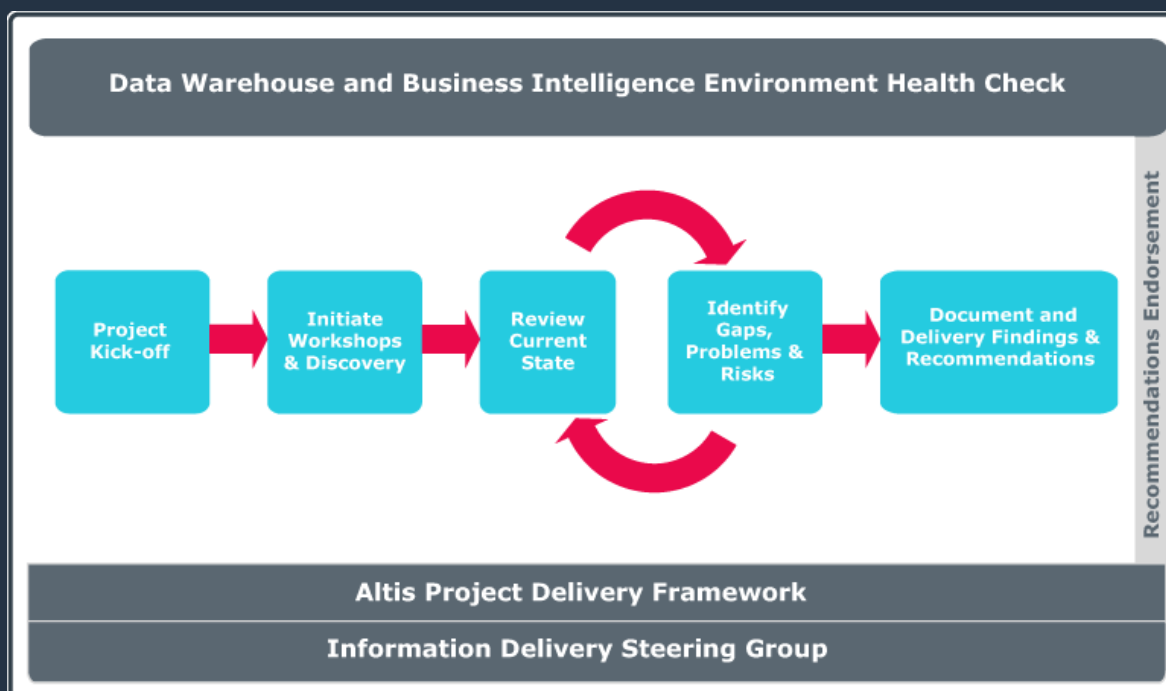

Our Data and Analytics Health Check can provide you with:

- An independent, vendor-neutral review of your current solution, in partnership with key stakeholders within your business
- A clear and complete picture of your current Data and Analytics environment including:
 - Data and Analytics strategy
 - Data and Analytics architecture, models and database
 - Data integration processes (ETL or ELT)
 - Information delivery and data visualisation toolsets
 - Data and Analytics management and governance model
 - Business engagement processes
- Level of business engagement
- Understanding of your current Data and Analytics solution capabilities and scalability
 - How accessible is the information?
 - How is the information used?
 - Does the current solution satisfy business requirements?
 - Is your information relevant?
 - Do you trust your information?
- Comparison and gap analysis against industry best practice
- Reduced risk from a time-boxed service designed to provide high impact recommendations on how to maximise the return on your Data and Analytics investment

- Business Analytics
- Business Intelligence
- Data Management
- Data Warehouse

Our Data and Analytics Health Check Framework

Our Proven Approach

The Health Check begins with a kick off meeting with key sponsors to ensure alignment with business priorities. We then work with you to identify the strengths and weaknesses of your current solution and provide recommendations for improvement.

Our prove framework includes

- Interview key sponsors, business users and IT staff supporting the solution
- Review and exploration of the key business objectives of your solution
- Analysis of the technology stack, Data and Analytics solution and current challenges facing your solution
- Review of the core usage, including existing reporting and analytics
- Realistic recommendations and a roadmap to move forward
- A summary of the findings delivered in a final report and presentation

Call Altis today to find out how we can help reduce your business risk.
