SCALABLE, RESILIENT CORE NETWORK PLATFORM

Blue Sky Systems' range of hosted IT services required a zero downtime platform built for maximum diversity and resilience.

We deliver scalable infrastructure and ongoing network management.

Like many of our customers, Blue Sky Systems want a data network infrastructure partner who can design, implement and manage the physical elements of their platform as their requirements grow and change. This enables them to focus their resources on the delivery of their applications, as well as the commercial growth of the business.

We are able to offer Blue Sky the depth of technical consultation they require, proof of separation of their connectivity routes, as well as a choice of facilities that match their stringent requirements.

All of this means that Blue Sky Systems have peace of mind knowing that their platform has a solid foundation, managed by a team of experts, enabling them to focus on their commercial success, servicing their clients and managing their application layer services.

Due to Next Connex's unique position as an open-access data centre partner, we are able to offer a number of impartial options for Blue Sky to choose from.

THE RIGHT FIT

"Working closely with us all the way from concept to implementation, other providers were simply not able to offer the same level of design expertise and support as Next Connex. They were the stand out choice."

Jonathan Bastin
Technical Director

WHAT WE DO FOR ...

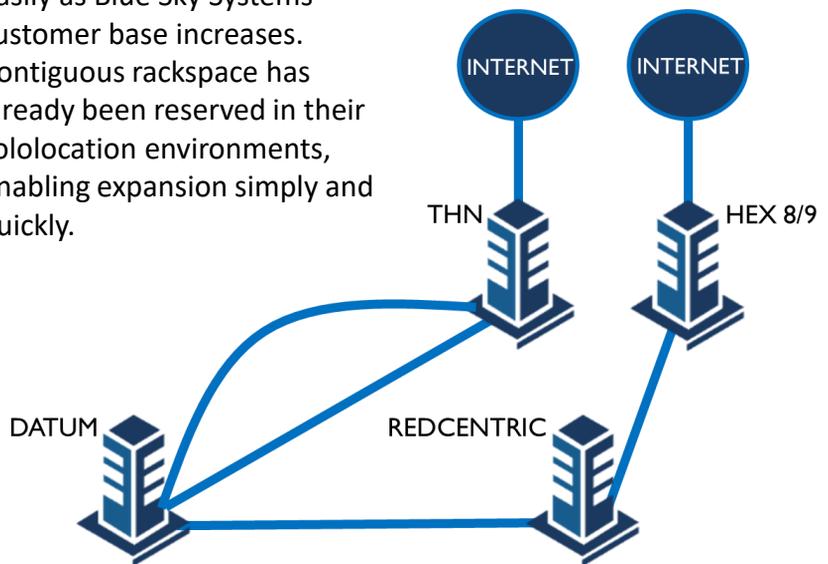

SCALABLE, RESILIENT CORE PLATFORM NETWORK

Blue Sky Systems have diverse, high bandwidth links between their main platform equipment, in Datum Datacentre in Farnborough, and their secondary platform in Redcentric, City of London. This gives their platform full redundancy, as well as independent links to network hubs in Telehouse North and Harbour Exchange 8/9, one being diversely routed.

The Next Connex core network means that Blue Sky have three diverse IP transit routes, so that their platform has the robustness it needs.

Each network link is designed to be scaled up quickly and easily as Blue Sky Systems' customer base increases. Contiguous rackspace has already been reserved in their colocation environments, enabling expansion simply and quickly.

At the time of writing, Blue Sky Systems have upgraded all of their links from 1Gb to 10Gb and doubled their rackspace requirement. All of this was facilitated with zero disruption, within 7 working days of Next Connex receiving the request.

ABOUT BLUE SKY SYSTEMS

Blue Sky Systems are a UK based hosting company that guarantee your data stays in the UK. Priding themselves on offering the best support and customer interaction from inception, throughout implementation and support. They deliver highly available solutions to meet their customers' requirements by working together to scope, design, build and deliver fully managed cloud services or hybrid systems using appropriate on-site and cloud technologies.
