

**SAVE MORE,  
GO GREEN.**

## EXPERIENCE THE JOY OF SAVING WITH ES POWER

We know how important cash flow is to small companies, and sometimes you may be uncertain about the tenure of the lease over your premises. That's why we tailored specific price plans to benefit SMEs and startups. Electricity is a basic need to run a business but the more you can save on utilities, the more you can focus on what's more important - growing your business.

To further manage your electricity requirements, ES Power features a personalised Master Dashboard which provides insights and charts needed to make better, informed decisions, giving you full control over your business' electricity consumption.

## FUTURE-PROOF YOUR BUSINESS - GO GREEN WITH ES POWER!

ES Power connects your business to a community that takes action to protect the environment. The carbon emissions related to your energy consumption are fully offset and you have an additional option to complement your plan with environmental attributes from renewable sources.

This step towards sustainability is an added value you can highlight in your marketing efforts. As more and more customers are concerned about picking products and services from responsible firms, being green can be a competitive advantage for your business.
